1. Scientific research methodology (ITM1105)	3
2. Methodology of teaching special subjects (MFO'M1105)	9
3. Managerial finance (BOM1105)	19
4. Financial risk management (MROB1205)	26
5. Budget-tax policy (BSS1105)	35
6. Sustainable finance (BAM1205)	45
7. The concept of teaching Economic Sciences (IFO'M2205)	54
8. Financial markets 2 (IS2205)	64
9. Public finance management (DMB2205)	73
10. Financial statement analysis (MHT2205)	82
11. Public debt policy (DQS2305)	90
12. Behavioral finance (XAM2305)	101
13. International financial relations (XMMU2305)	112
14. Analysis of the international financial market (XMBT2305)	124
15. Management of investment projects (ILB2305)	135
16. International financial centers (XMMA2305)	146
17. Procurement by budget and corporate customers (BKBX2305)	157
18. Public financial control (DMN2305)	166

1st ACADEMIC YEAR

Field	Description
Module Title	SCIENTIFIC RESEARCH METHODOLOGY
Module Code	ITM1105
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	I semester
Module objective	The objective of the Personal Finance module is to form an understanding of the essence, principles, and stages of scientific research. Key objectives include providing systematized knowledge on research methodology, scientific abstracting, and citation principles; guiding students through testing and publishing research findings; and preparing master's students for the defense of their master's thesis and formalization of dissertation outcomes.
Module Learning Outcomes	Knowledge: LO1. Explain the methodological foundations of scientific knowledge and the emergence of problematic situations in science. LO2. Interpret scientific research methodologies, techniques, tools, phases, and stages. LO3. Identify necessary documentary sources of information, procedures for publishing research results, and structural requirements for a master's thesis. Skills: LO4. Formulate and select scientific problems, classify sciences, and establish general procedures for conducting scientific research. LO5. Apply appropriate qualitative and quantitative research methods to solve specific economic and managerial problems.

	LO6. Organize information retrieval, data collection, processing, and analytical activities required for writing a master's thesis. Competencies: LO7. Formulate original research concepts, construct hypotheses, and structure scientific research effectively. LO8. Prepare and publish scientific articles in international citation databases, adhering strictly to research ethics, citation norms, and academic integrity. LO9. Synthesize research results, prepare lecture notes and reports, and successfully present and defend a master's thesis.
Content	Lectures: L1. Methodological foundations of scientific knowledge: Essence, principles, and historical development of scientific understanding. L2. Choosing a research direction and a scientific problem: Criteria for selecting research topics, problem formulation, and hypothesis creation. L3. Scientific research methodology and techniques: Methodological frameworks, research design, and technical organization. L4. Scientific research tools and methods: Classification and application of general and specific scientific methods. L5. Organizing the research process: Stages, timelines, and structural workflow of a scientific project. L6. Theoretical and experimental research: Modeling, experimentation, and theoretical reasoning methods. L7. Basic methods of searching for information for scientific research: Documentary sources, digital databases, and search strategies. L8. Collecting, processing, and analyzing data for scientific research: Empirical data

	collection, quantitative processing, and analytical interpretation. L9. Research ethics: Academic integrity, avoidance of plagiarism, citation standards, and ethical responsibilities. L10. Publishing research results: Preparation of scientific articles, abstracts, and submission to peer-reviewed international journals. L11. Master's thesis as a type of scientific research: Requirements, structure, preliminary review, and defense procedures. Practical lessons: P1. Methodological foundations of scientific knowledge: Analyzing historical and modern paradigms of scientific inquiry. P2. Choosing a research direction and a scientific problem: Practical exercises in defining problem statements and research objectives. P3. Scientific research methodology and techniques: Practical design of research frameworks for economic studies. P4. Scientific research tools and methods: Selecting and applying quantitative tools and statistical analysis. P5. Organizing the research process: Drafting research plans, outlines, and timelines for thesis work. P6. Theoretical and experimental research: Constructing theoretical models and hypothesis testing scenarios. P7. Basic methods of searching for information for scientific research: Hands-on searching in academic databases and international citation indexes. P8. Collecting, processing, and analyzing data for scientific research: Practical data processing, econometric/statistical handling, and graphical representation.
--	--

	P9. Research ethics: Case studies on plagiarism detection, proper citation techniques, and reference management. P10. Publishing research results: Formatting research articles according to international journal guidelines. P11. Master's thesis as a type of scientific research: Structuring thesis chapters and preparing thesis defense presentations. Self-Assignments: SA1. Methodological foundations of scientific knowledge: Writing an essay or literature review on scientific methodology. SA2. Choosing a research direction and a scientific problem: Formulating a detailed research proposal. SA3. Scientific research methodology and techniques: Developing research design frameworks. SA4. Scientific research tools and methods: Analyzing empirical and theoretical research instruments. SA5. Organizing the research process: Constructing a step-by-step thesis execution schedule. SA6. Theoretical and experimental research: Preparing analytical outlines for experimental models. SA7. Basic methods of searching for information for scientific research: Building an annotated bibliography and analytical reference list. SA8. Collecting, processing, and analyzing data for scientific research: Performing statistical data processing on economic indicators. SA9. Research ethics: Creating a comprehensive glossary and ethical guidelines checklist.
--	---

	SA10. Publishing research results: Drafting an abstract and manuscript for conference or journal submission. SA11. Master's thesis as a type of scientific research: Preparing multimedia presentations and documentation for thesis defense.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, independent analytical work, case assignments, multimedia presentations, translation of source materials, and working with scientific information databases.
Prerequisites	Methodology of teaching specialized subjects (MFO'M1105) Fiscal policy (BSS1105) Sustainable finance (BAM1205)
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student performance is assessed through continuous assessment (20%), midterm assessment (30%), and a final written examination (50%). The continuous assessment (20%) evaluates classroom participation, practical exercise performance, and completion of basic independent assignments (e.g., essays, outlines, glossaries, source translations, and case studies). The midterm assessment (30%) evaluates mid-term tests, written control works, and structured independent study projects (e.g., drafting a research proposal, developing infographics, and preparing conference abstracts). The final assessment (50%) is a comprehensive final examination (written, oral, or test) covering theoretical methodology questions, problem-solving tasks, and evaluation of research readiness for thesis preparation. Grading criteria and assessment scale:

	Student academic achievement is evaluated based on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): Demonstrates complete understanding of research methodology, presents topics with scientific logic and zero errors, thinks independently, masters legal/regulatory documents, completes all independent tasks, and has published a scientific article on a relevant topic. Good (70–89.9 points / Grade 4): Understands the core concepts and practical significance, avoids major logical or scientific errors, completes assignments, correctly answers questions, and masters regulatory documents. Average / Satisfactory (60–69.9 points / Grade 3): Demonstrates a narrow, superficial understanding of research methodology, provides vague answers, and makes minor errors in structuring texts. Unsatisfactory (0–59.9 points / Grade 2): Shows no preparation or understanding, submits plagiarized/copied work, makes serious logical errors, or fails to answer exam questions.

Field	Description
Module Title	METHODOLOGY OF TEACHING SPECIAL SUBJECTS
Module Code	MFO'M1105
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	I semester
Module objective	The purpose of this module is to develop students' knowledge, practical skills, and professional competencies in the principles and practices of teaching specialized subjects. The module provides a comprehensive understanding of curriculum design, educational standards and normative documents, instructional planning, learning objectives, teaching methods, organizational forms of instruction, educational technologies, innovative teaching approaches, creativity in teaching, and assessment of learning outcomes. It prepares students to apply modern pedagogical principles, learner-centered instructional strategies, innovative educational technologies, and effective assessment methods to design, deliver, and evaluate specialized subjects in higher education.
Module Learning Outcomes	Knowledge: LO1. Explain the principles, objectives, and significance of the methodology of teaching specialized subjects. LO2. Analyze major educational paradigms, pedagogical theories, and normative documents that guide the teaching process.

	LO3. Explain the principles, characteristics, and applications of interactive and learner-centered teaching methods. LO4. Describe the functions and effective use of didactic resources, educational technologies, and instructional tools in the teaching process. Skills: LO5. Design lesson plans by formulating measurable learning objectives and selecting appropriate teaching methods and organizational forms of instruction. LO6. Apply appropriate assessment methods and evaluation techniques to monitor and improve students' learning outcomes in specialized subjects. LO7. Develop instructional materials and organize effective teaching activities using innovative pedagogical approaches and educational technologies. Competencies: LO8. Effectively implement modern teaching methods, instructional technologies, and organizational forms in higher education. LO9. Analyze pedagogical situations, identify instructional challenges, and propose appropriate solutions to improve teaching effectiveness. LO10. Demonstrate professional competence in planning, delivering, and evaluating specialized subject instruction in accordance with contemporary educational standards.
Content	Lectures: L1. Goals and objectives of the subject Methodology of Teaching Special Subjects: Explores the purpose, objectives, and significance of teaching methodology in developing professional competencies. L2. Educational and normative documents in the formation of the content of education and training: Examines the legal and

	regulatory documents that guide curriculum design and educational content. L3. Educational and normative documents in the formation of the content of education and training: Analyzes the role of educational standards and regulations in ensuring the quality of teaching and learning. L4. Setting learning objectives in designing and planning instruction: Introduces principles for formulating clear and measurable learning objectives in instructional planning. L5. Setting learning objectives in designing and planning instruction: Focuses on aligning learning objectives with teaching activities and expected learning outcomes. L6. Teaching methods used in the teaching process: Reviews traditional and modern teaching methods that promote effective student learning. L7. Teaching methods used in the teaching process: Compares different instructional methods and their application in various educational settings. L8. Forms of organization of education used in the teaching process: Explains the organizational forms of instruction, including lectures, seminars, and practical classes. L9. Forms of organization of education used in the teaching process: Discusses the selection of appropriate instructional formats to improve learning effectiveness. L10. Educational tools used in the teaching process: Describes the use of educational resources and technologies that support teaching and learning. L11. Educational tools used in the teaching process: Highlights the effective integration of digital and traditional teaching tools into classroom practice. L12. Innovative training and creativity of the teacher: Examines innovative teaching
--	---

	approaches that encourage creativity and active student engagement. L13. Innovative training and creativity of the teacher: Emphasizes the teacher's creative role in designing learner-centered and technology-enhanced instruction. L14. Methodology for monitoring the quality of students' mastery of knowledge in special subjects: Introduces methods and assessment techniques for evaluating students' knowledge and learning achievements. L15. Methodology for monitoring the quality of students' mastery of knowledge in special subjects: Explores effective approaches to measuring learning outcomes and improving educational quality. Practical lessons: P1. Goals and objectives of the subject Methodology of Teaching Special Subjects: Practical activities on identifying the goals and objectives of teaching methodology and applying them to professional teaching practice. P2. Educational and normative documents in the formation of the content of education and training: Practical analysis of educational laws, standards, and regulatory documents used in curriculum development. P3. Educational and normative documents in the formation of the content of education and training: Case studies on applying educational standards and normative documents to the design of teaching content. P4. Setting learning objectives in designing and planning instruction: Practical exercises on formulating clear, measurable, and achievable learning objectives for lessons. P5. Setting learning objectives in designing and planning instruction: Activities focused on aligning learning objectives with instructional methods and expected learning outcomes.
--	--

	P6. Teaching methods used in the teaching process: Practical application of traditional and innovative teaching methods through lesson-based activities. P7. Teaching methods used in the teaching process: Comparative analysis and selection of appropriate teaching methods for different instructional situations. P8. Forms of organization of education used in the teaching process: Practical planning of lectures, seminars, and practical classes based on instructional objectives. P9. Forms of organization of education used in the teaching process: Exercises on selecting effective instructional formats for various teaching and learning contexts. P10. Educational tools used in the teaching process: Practical use of educational resources and instructional technologies to support classroom activities. P11. Educational tools used in the teaching process: Hands-on integration of digital and traditional teaching tools into lesson implementation. P12. Innovative training and creativity of the teacher: Practical application of innovative teaching strategies that promote creativity and active learning. P13. Innovative training and creativity of the teacher: Activities focused on designing learner-centered and technology-supported instructional practices. P14. Methodology for monitoring the quality of students' mastery of knowledge in special subjects: Practical development and application of assessment methods for evaluating students' learning achievements. P15. Methodology for monitoring the quality of students' mastery of knowledge in special subjects: Case-based activities on designing assessment tools to measure
--	---

	learning outcomes and improve educational quality. Self-Assignments: SA1. Conceptual foundations of teaching special subjects: Independent study on the fundamental concepts, principles, and objectives of teaching specialized subjects. SA2. Terminological apparatus of the methodology of teaching special subjects: Independent exploration of key pedagogical terms and concepts used in the methodology of teaching specialized subjects. SA3. Presentation of teaching content in curricula and programs: Analysis of how teaching content is organized and presented in curricula and educational programs. SA4. Requirements for the development of model programs and work programs in specific disciplines: Study of the principles and requirements for designing model and course-specific teaching programs. SA5. Taxonomy of goals: Independent application of Bloom's taxonomy to classify and formulate learning objectives. SA6. The essence of active learning methods and their specific features: Examination of active learning methods and their role in enhancing student engagement and learning. SA7. The essence and importance of techniques for organizing collaborative work in groups: Investigation of collaborative learning techniques and their application in group-based instructional activities. SA8. Educational program levels and forms of education: Study of the structure, levels, and forms of educational programs within the higher education system. SA9. Independent training outside the classroom: Exploration of strategies for
--	---

	organizing effective independent learning beyond classroom instruction. SA10. Conditions for the effective use of educational tools: Analysis of the factors influencing the successful use of instructional resources and educational technologies. SA11. Requirements and rules for the development of teaching technology in a training session: Independent study of the principles for designing effective teaching technologies and instructional processes. SA12. Ways to design and plan presentation sessions: Practical development of presentation-based learning sessions using effective instructional planning techniques. SA13. Learning outcomes: Analysis of learning outcomes and their role in curriculum design, teaching, and assessment. SA14. Ways to develop three-level tests in special subjects: Independent design of three-level assessment tasks to evaluate different cognitive levels of student achievement. SA15. Methodological methods for forming and developing independent, creative, economic thinking of students: Study of teaching strategies that foster students' independent, creative, and analytical thinking.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, seminar discussions, lesson planning activities, microteaching, collaborative learning, case studies, independent assignments, classroom presentations, and the use of modern educational technologies and digital teaching tools.
Prerequisites	Scientific research methodology ITM1105
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student performance is assessed through continuous assessment (20%), midterm

	assessment (30%), and a final written examination (50%). The continuous assessment (20%) evaluates students' active participation in lectures and practical classes, contribution to discussions, completion of classroom activities, and performance in independent assignments. The assessment includes practical tasks such as analyzing the conceptual foundations and terminology of teaching specialized subjects, interpreting curricula and course programs, formulating learning objectives using Bloom's Taxonomy, selecting appropriate active learning methods, organizing collaborative learning activities, evaluating educational tools, and preparing instructional plans for specialized subjects. The midterm assessment (30%) consists of written theoretical tests, in-class quizzes, and evaluation of structured independent study projects. Key assignments include the analysis and development of curriculum and course programs, preparation of lesson plans and presentation sessions, design of teaching technologies for specialized subjects, development of learning outcomes and assessment criteria, construction of three-level test items, and analysis of innovative and learner-centered teaching approaches in higher education. The final assessment (50%) is a comprehensive written examination consisting of theoretical questions and practical pedagogical tasks. The examination evaluates students' ability to apply the methodology of teaching specialized subjects in curriculum design, lesson planning, selection of teaching methods and organizational forms, effective use of educational tools and instructional technologies, development of learning outcomes and assessment instruments, and
--	--

	application of pedagogical strategies that foster students' independent, creative, and critical thinking. Successful completion and submission of all assigned independent study tasks is a mandatory prerequisite for taking the final examination. Grading criteria and assessment scale: Student academic achievement is evaluated based on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student demonstrates a comprehensive and deep understanding of the principles and methodology of teaching specialized subjects, including curriculum design, educational standards, instructional planning, learning objectives, active learning methods, collaborative learning, educational technologies, assessment methods, and learning outcomes. The student effectively applies modern pedagogical approaches to lesson planning, develops high-quality instructional and assessment materials, analyzes pedagogical situations critically, demonstrates independent professional thinking, and completes all independent assignments accurately and with a high level of academic quality. Good (70–89.9 points / Grade 4): The student demonstrates a solid understanding of the methodology of teaching specialized subjects and its practical applications. The student successfully develops lesson plans, applies appropriate teaching methods and educational technologies, prepares assessment materials with only minor inaccuracies, and completes coursework and independent assignments with a good level of competence while demonstrating sound pedagogical reasoning.
--	---

	Average / Satisfactory (60–69.9 points / Grade 3): The student demonstrates a basic understanding of the concepts and principles of teaching specialized subjects but has limited ability to apply pedagogical knowledge in practical teaching situations. The student prepares lesson plans and instructional materials with some deficiencies, applies teaching and assessment methods with guidance, and requires additional support in designing effective learning activities and evaluating learning outcomes. Unsatisfactory (0–59.9 points / Grade 2): The student demonstrates insufficient knowledge of the methodology of teaching specialized subjects and is unable to apply fundamental pedagogical principles in instructional planning or classroom practice. The student has significant difficulties in developing lesson plans, selecting appropriate teaching methods, designing assessment tools, and interpreting learning outcomes, and fails to complete the required coursework and independent assignments at the minimum acceptable standard.

Field	Description
Module Title	MANAGERIAL FINANCE
Module Code	BOM1105
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	I semester
Module objective	The objective of the Managerial Finance module is to provide students with a comprehensive understanding of the principles and practices of managerial finance and their application to business decision-making, and to develop their analytical, critical-thinking and problem-solving skills necessary to solve real-world financial problems in a dynamic business environment.
Module Learning Outcomes	Knowledge: LO1. Demonstrate knowledge of the basic concepts, principles and objectives of managerial finance and their role in business decision-making. LO2. Understand and interpret financial statements, the time value of money, risk and return, and the capital budgeting techniques used in financial analysis. LO3. Explain the concepts of cost of capital, capital structure, working capital management, and financial planning in achieving organizational goals. Skills: LO4. Analyze financial statements and evaluate the financial performance of a business using appropriate financial tools and techniques.

	LO5. Apply capital budgeting techniques such as NPV and IRR to evaluate and select investment projects. LO6. Develop financial plans and recommend financing and working capital management decisions to support organizational goals. Competencies: LO7. Make sound financial decisions by combining financial analysis, risk assessment and strategic business judgment. LO8. Effectively communicate financial information and recommendations to support management decision-making. LO9. Demonstrate ethical and professional responsibility in analyzing financial issues and managing the organization's financial resources.
Content	Lectures: L1. Introduction to Managerial Finance: Introduction to the scope, aims and role of managerial finance in business decision-making. L2. Organisation of Financial Management: Examination of the organisation of financial management within a firm. L3. Strategy and Risk: Study of the relationship between business strategy and financial risk. L4. Present Value and Future Value of Money: Study of the time value of money – the present value and future value of money. L5. Capital Structure and Cost of Capital: Analysis of capital structure and the cost of capital. L6. Portfolio Management and the Capital Asset Pricing Model (CAPM): Examination of portfolio management and the Capital Asset Pricing Model (CAPM). L7. Investment Decisions: Study of investment decisions and capital budgeting techniques. L8. Financial Decisions: Study of financing decisions and the sources of finance.

	L9. Financial Reporting and Information Analysis: Examination of financial reporting and the analysis of financial information. L10. Working Capital Management: Study of working capital management and its components. L11. Equity and Debt Valuation: Analysis of the valuation of equity and debt. L12. Financial Distress: Study of financial distress and its causes and consequences. L13. Currency Markets and Foreign Exchange Risk: Examination of currency markets and foreign exchange risk. L14. Interest Rates and Interest Rate Risk: Study of interest rates and interest-rate risk. L15. Business Plans: Study of the preparation and use of business plans. Practical lessons: P1. Introduction to Managerial Finance: Practical introduction to the role of managerial finance in business decisions. P2. Organisation of Financial Management: Practical study of the organisation of financial management. P3. Strategy and Risk: Practical analysis of business strategy and financial risk. P4. Present Value and Future Value of Money: Practical calculations of the present value and future value of money. P5. Capital Structure and Cost of Capital: Practical analysis of capital structure and the cost of capital. P6. Portfolio Management and the Capital Asset Pricing Model (CAPM): Practical application of portfolio management and the CAPM. P7. Investment Decisions: Practical evaluation of investment decisions using capital budgeting techniques.
--	--

	P8. Financial Decisions: Practical analysis of financing decisions and sources of finance. P9. Financial Reporting and Information Analysis: Practical analysis of financial reporting and financial information. P10. Working Capital Management: Practical study of working capital management. P11. Equity and Debt Valuation: Practical valuation of equity and debt. P12. Financial Distress: Practical analysis of financial distress and its indicators. P13. Currency Markets and Foreign Exchange Risk: Practical analysis of currency markets and foreign exchange risk. P14. Interest Rates and Interest Rate Risk: Practical study of interest rates and interest-rate risk. P15. Business Plans: Practical preparation of a business plan. Self-Assignments: SA1. Economic nature and content of financial management: Independent study of the economic nature and content of financial management. SA2. Corporate governance and company financing: Study of corporate governance and company financing. SA3. Financial and investment decisions in management: Examination of financial and investment decisions in management. SA4. Characteristics of investor risk and return in capital markets: Analysis of the characteristics of investor risk and return in capital markets. SA5. Risk management strategy: Study of risk management strategy. SA6. Management principles related to risk management: Study of the management principles related to risk management.
--	--

	SA7. Enterprise risk management: Examination of enterprise risk management. SA8. Traditional theory of capital structure: Study of the traditional theory of capital structure. SA9. Debt capital as a component of capital structure: Analysis of debt capital as a component of capital structure. SA10. Cost of capital for foreign investments: Study of the cost of capital for foreign investments. SA11. Secondary capital market (stock market) and its efficiency: Examination of the secondary capital (stock) market and its efficiency. SA12. Relationship between portfolio management and financial and investment decisions: Study of the relationship between portfolio management and financial and investment decisions. SA13. Foreign direct investment and its effective utilisation: Analysis of foreign direct investment and its effective utilisation. SA14. Investment decisions and inflation: Study of investment decisions and inflation. SA15. Stages of financial decision-making: Examination of the stages of financial decision-making.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, and independent analytical work. Independent work is carried out in various forms, including writing essays and lecture outlines on given topics, preparing lecture materials, compiling glossaries, completing case assignments, working with information and analytical materials, translating sources, creating infographics, preparing conference abstracts, and developing multimedia presentations.
Exams and Assessment	Type of examination (written, oral, project) and its weight:

	Student learning is assessed through tests, oral work, and written work. In line with the standard structure, performance is evaluated through continuous assessment (20%), midterm assessment (30%), and a final examination (50%). The continuous assessment evaluates active participation in lectures and practical lessons, seminar discussions, and the completion of independent work such as essays, glossaries, case assignments, infographics, and multimedia presentations on the topics of the course. The midterm assessment consists of written and oral tests together with the evaluation of structured independent study projects. The final examination is a comprehensive test of the theoretical and practical mastery of the course, covering the principles and objectives of managerial finance, financial statements and the time value of money, risk and return, capital structure and the cost of capital, portfolio management and the CAPM, investment and financing decisions, working capital management, equity and debt valuation, foreign exchange and interest-rate risk, and business plans. Successful completion of all assigned independent study tasks is a prerequisite for taking the final examination. Grading criteria and assessment scale: Student academic achievement is evaluated on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student can fully explain the essence and content of the subject, maintains scientific rigor and logic while avoiding errors and confusion, has a clear understanding of the theoretical and practical significance of the subject materials, demonstrates independent thinking, answers questions clearly and concisely, carefully prepares outlines, completes all independent
--	---

	assignments fully and accurately, fully masters the laws and other regulatory legal documents related to the subject, publishes a scientific article on a related topic, and can explain historical processes. Good (70–89.9 points / Grade 4): The student understands the essence and content of the subject without scientific or logical confusion, understands the practical significance of the content, performs the tasks and assignments within the curriculum framework, correctly answers the questions given, carefully formulates outlines, fully completes independent assignments, and masters the laws and other regulatory documents related to the subject. Average / Satisfactory (60–69.9 points / Grade 3): The student has a general understanding of the subject, covers and explains topics in a narrow scope with some confusion, does not explain fluently, gives vague and confusing answers to questions, and does not properly formulate the subject text. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student shows no preparation, has no understanding of the subject, has copied the subject text from others, makes serious mistakes and confusion in the text, does not answer the questions asked, or does not know the subject.

Responsible Lecturer	Avazov Ergash Xidirberdievich., Candidate of Economic Sciences, Associate Professor.

Field	Description
Module Title	FINANCIAL RISK MANAGEMENT
Module Code	MROB1205
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	I semester (first-year master's degree)
Module objective	The objective of the Financial Risk Management module is to develop in students knowledge and skills concerning the essence of risk and risk management and its nature, the risks of the financial market (their types and nature), the management of stock-market risks and banking risks, and the management of credit, currency, interest-rate, inflation and investment risks.
Module Learning Outcomes	Knowledge: LO1. Explain the economic essence of financial risks and the necessity of managing them, the concept of risk and its types, the concept of risk management and its application in practice, and the methods of assessing financial risks. Skills: LO2. Apply the methods of assessing and classifying financial risks and the stages of organizing risk management, and use the main methods of managing risks. Competencies: LO3. Make decisions on managerial tasks. LO4. Select appropriate strategic methods in risk management. LO5. Evaluate advanced foreign experience in reducing financial risks and the features of applying it in Uzbekistan. LO6. Select appropriate strategic methods in risk management.

	LO7. Apply management skills to address the risk of enterprises losing their financial independence.
Content	Lectures: L1. The economic essence of financial risks and the necessity of managing them: Examination of the economic nature of financial risks, the sources from which they arise, and the reasons why their systematic management is essential for enterprises and financial institutions. L2. The concept of risk and its types: Study of the definition of risk and the classification of its main types, distinguishing pure and speculative as well as systematic and unsystematic risks. L3. The concept of risk management and its essence. Methods of assessing financial risks: Exploration of the essence and stages of the risk management process and an overview of the qualitative and quantitative methods used to assess financial risks. L4. Value-at-Risk (VaR) methodology. The Black-Scholes and Markowitz models: Analysis of the Value-at-Risk approach and the application of the Black-Scholes and Markowitz models in measuring and managing financial risk. L5. Managing risks associated with financial institutions: Examination of the specific risks faced by financial institutions and the mechanisms and strategies used to manage them. L6. Managing stock-market risks: Study of the risks arising in stock markets and the instruments and techniques applied to manage price, portfolio and volatility risks. L7. Risks associated with banks and their regulators: Analysis of the risks inherent in banking activity and the role of regulatory bodies and prudential requirements in controlling them.

	L8. Managing credit risks: Exploration of the nature of credit risk, methods of assessing borrower creditworthiness, and approaches to limiting and hedging credit exposure. L9. Managing currency risks: Study of the causes of currency (exchange-rate) risk and the hedging instruments and strategies used to manage it. L10. Managing interest-rate risks: Examination of the impact of interest-rate fluctuations on financial positions and the methods used to measure and manage interest-rate risk. L11. Managing inflation risks: Analysis of the effect of inflation on the real value of assets and returns and the approaches used to protect against inflation risk. L12. Managing market risks: Study of the components of market risk and the models and instruments applied to measure and control market-wide fluctuations. L13. Managing operational risks: Exploration of the sources of operational risk within organizations and the frameworks and controls used to identify, assess and mitigate them. L14. Managing business risks: Examination of the business risks affecting an enterprise's operations and profitability and the strategic approaches used to manage them. L15. Methods of reducing financial risks. Managing the financial risks of enterprises: Study of the main methods of reducing financial risk – diversification, hedging, insurance and reserves – and their application in managing the financial risks of enterprises. Practical lessons: P1. The economic essence of financial risks and the necessity of managing them: Practical exercises and discussions identifying real sources of financial risk and justifying the
--	--

	need for risk management in specific enterprise situations. P2. The concept of risk and its types: Practical tasks classifying financial risks into their main types using real-world examples and case scenarios. P3. The concept of risk management and its essence. Methods of assessing financial risks: Practical application of the stages of the risk management process together with calculation exercises using basic financial risk assessment methods. P4. Value-at-Risk (VaR) methodology. The Black-Scholes and Markowitz models: Practical calculations applying the VaR methodology and the Black-Scholes and Markowitz models to sample data. P5. Managing risks associated with financial institutions: Case-based analysis of the risks faced by financial institutions and the design of appropriate risk management measures. P6. Managing stock-market risks: Practical exercises assessing stock-market risks and constructing strategies to manage portfolio and price volatility. P7. Risks associated with banks and their regulators: Practical analysis of banking risks and the application of regulatory requirements through case studies. P8. Managing credit risks: Practical assessment of borrower creditworthiness and the development of credit-risk mitigation strategies. P9. Managing currency risks: Practical exercises calculating currency exposure and applying hedging instruments to manage exchange-rate risk. P10. Managing interest-rate risks: Practical calculations measuring interest-rate sensitivity and selecting instruments to manage interest-rate risk.
--	---

	P11. Managing inflation risks: Practical exercises evaluating the impact of inflation on returns and applying measures to protect against inflation risk. P12. Managing market risks: Practical application of market-risk models and instruments to measure and control market fluctuations. P13. Managing operational risks: Practical identification and assessment of operational risks and the design of control measures using case studies. P14. Managing business risks: Practical analysis of the business risks affecting an enterprise and the formulation of strategies to manage them. P15. Methods of reducing financial risks. Managing the financial risks of enterprises: Practical application of diversification, hedging, insurance and reserve methods to reduce and manage the financial risks of a sample enterprise. Self-Assignments: SA1. The essence of financial risks and the main features of their classification: Independent study of the nature of financial risks and the criteria used to classify them. SA2. The necessity and essence of studying financial risks in conditions of economic transformation: Independent analysis of why the study of financial risks is particularly important under conditions of economic transformation. SA3. The interpretations of risk by eminent economists: Review and comparison of the definitions and interpretations of risk given by leading economists. SA4. The factors that give rise to risk: Independent examination of the internal and external factors that generate financial risk.
--	---

	SA5. Pure and speculative risks: Study of the distinction between pure and speculative risks with supporting examples. SA6. Systematic and unsystematic risks: Analysis of the difference between systematic and unsystematic risks and their significance for portfolio management. SA7. Risks that arise according to the line of activity of enterprises: Independent study of how the specific line of activity of an enterprise shapes the risks it faces. SA8. The essence of risk management and the risk management system: Examination of the essence of risk management and the structure of a risk management system. SA9. Organizing risk management and its functions: Study of the organization of risk management within an enterprise and its main functions. SA10. Risk management at enterprises in developed countries and the features of applying it in Uzbekistan: Comparative analysis of risk management practices in developed countries and the features of adapting them to Uzbekistan. SA11. The rules for selecting strategic methods in risk management: Independent study of the criteria and rules for selecting strategic risk management methods. SA12. Methods of constructing the “probability tree” and its assessment: Practical study of the construction and assessment of the probability-tree method for evaluating risk. SA13. The VaR method of assessing risks: Independent study of the Value-at-Risk method and its application in assessing financial risks. SA14. The Monte Carlo method of assessing risks: Study of the Monte Carlo simulation method and its use in assessing financial risks.
--	--

	SA15. Risks as a main factor and problem in operating in financial markets: Analysis of the role of risk as a central factor and challenge in operating in financial markets. SA16. The Markowitz models for assessing financial-market risks: Study of the Markowitz portfolio models and their application in assessing financial-market risks. SA17. The Sharpe models for assessing financial-market risks: Study of the Sharpe models and their application in assessing financial-market risks. SA18. Information about financial-market risks and its significance in analyzing risks: Independent examination of the role of information about financial-market risks in the analysis of risk. SA19. The correct selection of stock-market instruments in forming investment portfolios: Study of the principles for correctly selecting stock-market instruments when forming investment portfolios. SA20. Diversification of a portfolio of stock-market instruments: Analysis of portfolio diversification as a method of reducing investment risk. SA21. Analysis of the efficiency of funds invested in securities: Independent assessment of the efficiency of funds invested in securities. SA22. Forming a reserve to cover probable losses: Study of the principles and methods of forming reserves to cover probable financial losses.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, and independent analytical work. Independent work is carried out in various forms, including writing essays and lecture outlines on given topics, preparing lecture materials, compiling glossaries,

	completing case assignments, working with information and analytical materials, translating sources, creating infographics, preparing conference abstracts, and developing multimedia presentations.
Prerequisites	Sustainable finance (BAM1205) Management finance (BOM1105) Management of investment projects (ILB2305)
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student learning is assessed through tests, oral work, and written work. In line with the standard structure, performance is evaluated through continuous assessment (20%), midterm assessment (30%), and a final examination (50%). The continuous assessment evaluates active participation in lectures and practical lessons, seminar discussions, and the completion of independent work such as essays, glossaries, case assignments, infographics, and multimedia presentations on the topics of the course. The midterm assessment consists of written and oral tests together with the evaluation of structured independent study projects. The final examination is a comprehensive test of the theoretical and practical mastery of the course, covering the essence and classification of financial risks, the methods of assessing risks (the VaR and Monte Carlo methods, and the Black-Scholes, Markowitz and Sharpe models), and the management of financial-institution, stock-market, banking, credit, currency, interest-rate, inflation, market, operational and business risks. Successful completion of all assigned independent study tasks is a prerequisite for taking the final examination. Grading criteria and assessment scale:

	Student academic achievement is evaluated on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student can fully explain the essence and content of the subject, maintains scientific rigor and logic while avoiding errors and confusion, has a clear understanding of the theoretical and practical significance of the subject materials, demonstrates independent thinking, answers questions clearly and concisely, carefully prepares outlines, completes all independent assignments fully and accurately, fully masters the laws and other regulatory legal documents related to the subject, publishes a scientific article on a related topic, and can explain historical processes. Good (70–89.9 points / Grade 4): The student understands the essence and content of the subject without scientific or logical confusion, understands the practical significance of the content, performs the tasks and assignments within the curriculum framework, correctly answers the questions given, carefully formulates outlines, fully completes independent assignments, and masters the laws and other regulatory documents related to the subject. Average / Satisfactory (60–69.9 points / Grade 3): The student has a general understanding of the subject, covers and explains topics in a narrow scope with some confusion, does not explain fluently, gives vague and confusing answers to questions, and does not properly formulate the subject text. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student shows no preparation, has no understanding of the subject, has copied the subject text from others, makes serious mistakes and confusion in the text, does not answer the questions asked, or does not know the subject.

Field	Description
Module Title	BUDGET-TAX POLICY
Module Code	BSS1105
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	II semester
Module objective	The objective of the Budget-Tax Policy module is to provide students with theoretical knowledge of the prospects of planning state finances and the strategic and tactical tasks of budget and tax policy, and to develop their skills and abilities

	related to the main directions of the current state budget and tax policy, so as to train highly qualified economists.
Module Learning Outcomes	Knowledge: LO1. Explain the economic essence, necessity and functions of budget-tax policy. LO2. Interpret the main changes in the financial policy of the Republic of Uzbekistan. LO3. Explain the global experience of budget functions and the role of budget-tax policy in the budget systems of foreign countries. Skills: LO4. Ensure the unity of budget and tax policy. LO5. Analyze the directions of budget and tax policy at the macro and micro levels. Competencies: LO6. Apply methods to analyze the coherence of fiscal policy. LO7. Apply ways to ensure the stability of tax-budget policy in economic development.
Content	Lectures: L1. Budget-tax policy: what do we study, and how?: Introduction to the subject and methods of studying budget-tax policy. L2. Models of forming a market economy and the interdependence of budget-tax policy: Study of the models of forming a market economy and their interdependence with budget-tax policy. L3. Models of forming a market economy and the interdependence of budget-tax policy: Further study of the models of forming a market economy and their interdependence with budget-tax policy. L4. Budget policy as the most important component of financial (budget-tax) policy: Examination of budget policy as the most important component of financial (budget-tax) policy.

	L5. Budget policy as the most important component of financial (budget-tax) policy: Further examination of budget policy as a key component of financial (budget-tax) policy. L6. Reducing the budget deficit as the central issue of budget policy: Study of reducing the budget deficit as the central issue of budget policy. L7. Reducing the budget deficit as the central issue of budget policy: Further study of reducing the budget deficit as the central issue of budget policy. L8. Fundamental principles of developing and implementing a modern tax policy: Study of the fundamental principles of developing and implementing a modern tax policy. L9. Optimizing the tax burden as the most pressing problem of tax policy: Analysis of optimizing the tax burden as the most pressing problem of tax policy. L10. Optimizing the tax burden as the most pressing problem of tax policy: Further analysis of optimizing the tax burden as a pressing problem of tax policy. L11. Rational provision of tax incentives as a guarantee for ensuring the effectiveness of tax policy: Study of the rational provision of tax incentives as a guarantee of the effectiveness of tax policy. L12. Rational provision of tax incentives as a guarantee for ensuring the effectiveness of tax policy: Further study of the rational provision of tax incentives for effective tax policy. L13. Current pressing problems of budget-tax policy, the objections raised against them, and ways to resolve these: Examination of the current pressing problems of budget-tax policy and ways to resolve them. L14. Current pressing problems of budget-tax policy, the objections raised against them, and ways to resolve these: Further
--	---

	examination of the pressing problems of budget-tax policy and their resolution. L15. Fundamental principles (priority directions) for improving budget-tax policy in Uzbekistan: Study of the fundamental principles (priority directions) for improving budget-tax policy in Uzbekistan. Practical lessons: P1. Budget-tax policy: what do we study, and how?: Practical study of the subject and methods of budget-tax policy. P2. Models of forming a market economy and the interdependence of budget-tax policy: Practical analysis of the models of forming a market economy and budget-tax policy. P3. Models of forming a market economy and the interdependence of budget-tax policy: Further practical analysis of market-economy models and budget-tax policy. P4. Budget policy as the most important component of financial (budget-tax) policy: Practical study of budget policy as a key component of financial policy. P5. Budget policy as the most important component of financial (budget-tax) policy: Further practical study of budget policy within financial (budget-tax) policy. P6. Reducing the budget deficit as the central issue of budget policy: Practical analysis of reducing the budget deficit as the central issue of budget policy. P7. Reducing the budget deficit as the central issue of budget policy: Further practical analysis of reducing the budget deficit. P8. Fundamental principles of developing and implementing a modern tax policy: Practical study of the principles of developing and implementing a modern tax policy.
--	---

	P9. Optimizing the tax burden as the most pressing problem of tax policy: Practical analysis of optimizing the tax burden. P10. Optimizing the tax burden as the most pressing problem of tax policy: Further practical analysis of optimizing the tax burden. P11. Rational provision of tax incentives as a guarantee for ensuring the effectiveness of tax policy: Practical study of the rational provision of tax incentives. P12. Rational provision of tax incentives as a guarantee for ensuring the effectiveness of tax policy: Further practical study of the rational provision of tax incentives. P13. Current pressing problems of budget-tax policy, the objections raised against them, and ways to resolve these: Practical analysis of the current problems of budget-tax policy and their resolution. P14. Current pressing problems of budget-tax policy, the objections raised against them, and ways to resolve these: Further practical analysis of the problems of budget-tax policy. P15. Fundamental principles (priority directions) for improving budget-tax policy in Uzbekistan: Practical study of the priority directions for improving budget-tax policy in Uzbekistan. Self-Assignments: SA1. The content and principles of financial policy: Independent study of the content and principles of financial policy. SA2. Structural components (directions) of financial policy: Study of the structural components (directions) of financial policy. SA3. Financial policy at the current stage and its distinctive features: Examination of financial policy at the current stage and its distinctive features.
--	--

	SA4. The content, essence, structural composition, and forms of manifestation of budget policy: Study of the content, essence, structural composition and forms of manifestation of budget policy. SA5. Budget expenditures as the main form of manifestation of budget policy: Analysis of budget expenditures as the main form of manifestation of budget policy. SA6. Budget financing and budget policy: Study of budget financing and budget policy. SA7. Budget policy and budget norms (standards), expenditure estimates, and budget credit: Examination of budget policy and budget norms, expenditure estimates and budget credit. SA8. Issues and tasks in spending budget expenditures, and their interrelation with budget policy: Study of the issues and tasks in spending budget expenditures and their interrelation with budget policy. SA9. The budget system and budget structure, and their role in implementing budget policy: Analysis of the budget system and budget structure and their role in implementing budget policy. SA10. The interdependence of the budget process and budget policy: Study of the interdependence of the budget process and budget policy. SA11. Budget deficit: its essence, definition, types, and causes: Examination of the budget deficit – its essence, definition, types and causes. SA12. A strategic approach to the budget deficit and the main directions of measures to reduce its level: Study of a strategic approach to the budget deficit and the measures to reduce its level.
--	---

	SA13. Sources of financing the budget deficit: Study of the sources of financing the budget deficit. SA14. Conceptual approaches to the problems of budget deficit and budget policy: Analysis of conceptual approaches to the problems of budget deficit and budget policy. SA15. The situation regarding taxes, the tax system, and tax policy: Study of the situation regarding taxes, the tax system and tax policy. SA16. The most pressing problem of taxation theory, and tax policy: Examination of the most pressing problem of taxation theory and tax policy. SA17. The principles of the tax system, taxation, and tax legislation, and their impact on tax policy: Study of the principles of the tax system, taxation and tax legislation and their impact on tax policy. SA18. Taxes and tax policy as instruments for regulating the economy: Analysis of taxes and tax policy as instruments for regulating the economy. SA19. Tax policy and issues of attracting foreign investment: Study of tax policy and the issues of attracting foreign investment. SA20. Increasing tax collection, and tax policy: Examination of increasing tax collection and tax policy. SA21. Tax burden: the procedure and level of its determination and its distribution: Study of the tax burden – the procedure and level of its determination and its distribution. SA22. Controversial issues in reducing the tax burden: Analysis of the controversial issues in reducing the tax burden. SA23. Principles of rationally granting tax incentives: Study of the principles of rationally granting tax incentives. SA24. Practical cases to be taken into account when rationally granting tax
--	---

	incentives: Examination of the practical cases to consider when rationally granting tax incentives. SA25. The dialectics of tax and incentive: Study of the dialectics of tax and incentive. SA26. Negative aspects of tax incentives: Analysis of the negative aspects of tax incentives. SA27. Paying taxes – a mark of freedom, not of servitude: Examination of the view that paying taxes is a mark of freedom, not of servitude. SA28. The low level of monthly salaries paid from the budget: Study of the problem of the low level of monthly salaries paid from the budget. SA29. The large number of taxes, and their continuing increase: Analysis of the problem of the large number of taxes and their continuing increase. SA30. The high level of tax rates: Study of the problem of the high level of tax rates.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, and independent analytical work. Independent work is carried out in various forms, including writing essays and lecture outlines on given topics, preparing lecture materials, compiling glossaries, completing case assignments, working with information and analytical materials, translating sources, creating infographics, preparing conference abstracts, and developing multimedia presentations.
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student learning is assessed through tests, oral work, and written work. In line with the standard structure, performance is evaluated through continuous assessment (20%), midterm assessment (30%), and a final examination

	(50%). The continuous assessment evaluates active participation in lectures and practical lessons, seminar discussions, and the completion of independent work such as essays, glossaries, case assignments, infographics, and multimedia presentations on the topics of the course. The midterm assessment consists of written and oral tests together with the evaluation of structured independent study projects. The final examination is a comprehensive test of the theoretical and practical mastery of the course, covering the essence and functions of budget-tax policy, the models of a market economy and budget-tax policy, budget policy and the budget deficit, the principles of modern tax policy, the optimization of the tax burden, the rational provision of tax incentives, the current problems of budget-tax policy, and the directions for improving it in Uzbekistan. Successful completion of all assigned independent study tasks is a prerequisite for taking the final examination. Grading criteria and assessment scale: Student academic achievement is evaluated on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student can fully explain the essence and content of the subject, maintains scientific rigor and logic while avoiding errors and confusion, has a clear understanding of the theoretical and practical significance of the subject materials, demonstrates independent thinking, answers questions clearly and concisely, carefully prepares outlines, completes all independent assignments fully and accurately, fully masters the laws and other regulatory legal documents related to the subject, publishes a scientific article on a related topic, and can explain historical processes.
--	---

	Good (70–89.9 points / Grade 4): The student understands the essence and content of the subject without scientific or logical confusion, understands the practical significance of the content, performs the tasks and assignments within the curriculum framework, correctly answers the questions given, carefully formulates outlines, fully completes independent assignments, and masters the laws and other regulatory documents related to the subject. Average / Satisfactory (60–69.9 points / Grade 3): The student has a general understanding of the subject, covers and explains topics in a narrow scope with some confusion, does not explain fluently, gives vague and confusing answers to questions, and does not properly formulate the subject text. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student shows no preparation, has no understanding of the subject, has copied the subject text from others, makes serious mistakes and confusion in the text, does not answer the questions asked, or does not know the subject.

Field	Description
Module Title	SUSTAINABLE FINANCE
Module Code	BAM1205
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	II semester
Module objective	The objective of the Sustainable Finance module is to explain the principles and distinctive characteristics of sustainable finance and the theoretical foundations of ESG risks, to develop students' ability to evaluate the impact of ESG principles on capital valuation and portfolio returns, to study the role of ESG rating agencies and ESG-based governance by financial managers and shareholders in corporate structures, and to form their knowledge and skills in green financing, responsible investment and Islamic finance as a model of sustainable development.
Module Learning Outcomes	Knowledge: LO1. Understand the concept of sustainable finance and its principles. LO2. Explain the process of implementing ESG principles in companies. LO3. Use financial tools to ensure financial sustainability. LO4. Collect and compile sovereign and corporate ESG data.

	Skills: LO5. Work with ESG rating agencies. LO6. Apply sustainability indicators, their types and their use. LO7. Apply Islamic finance for sustainable financial development. Competencies: LO8. Assess risks related to climate change and understand Islamic finance as a model for sustainable development. LO9. Understand green financing and investment responsibility. LO10. Understand social responsibility in financing sustainable development programs. LO11. Form an investment portfolio based on ecological principles.
Content	Lectures: L1. Principles of sustainable finance and its distinctive characteristics: Examination of the principles of sustainable finance and its distinctive characteristics. L2. The ESG ecosystem in sustainable finance: Study of the ESG ecosystem in sustainable finance. L3. Theoretical foundations of ESG risks in ensuring sustainable finance: Analysis of the theoretical foundations of ESG risks in ensuring sustainable finance. L4. The impact of ESG principles on the cost of capital and portfolio returns: Study of the impact of ESG principles on the cost of capital and portfolio returns. L5. Financial infrastructure and financial instruments in sustainable finance: Examination of the financial infrastructure and financial instruments in sustainable finance. L6. Financial infrastructure and financial instruments in sustainable finance: Further study of the financial infrastructure and instruments in sustainable finance.

	L7. ESG-based governance by financial managers and shareholders in corporate structures: Analysis of ESG-based governance by financial managers and shareholders in corporate structures. L8. The role of ESG rating agencies in determining sustainability indicators: Study of the role of ESG rating agencies in determining sustainability indicators. L9. Corporate reporting aimed at sustainable development: Examination of corporate reporting aimed at sustainable development. L10. Scientific foundations of the impact of climate change on financial stability: Study of the scientific foundations of the impact of climate change on financial stability. L11. Assessing risks associated with climate change: Analysis of the assessment of risks associated with climate change. L12. Green financing and investment responsibility: Study of green financing and investment responsibility. L13. Social responsibility in financing sustainable development programs: Examination of social responsibility in financing sustainable development programs. L14. Forming investment portfolios based on environmental principles: Study of the formation of investment portfolios based on environmental principles. L15. Islamic finance as a model of sustainable development: Analysis of Islamic finance as a model of sustainable development. Practical lessons: P1. Principles of sustainable finance and its distinctive characteristics: Practical study of the principles and characteristics of sustainable finance.
--	--

	P2. The ESG ecosystem in sustainable finance: Practical analysis of the ESG ecosystem in sustainable finance. P3. Theoretical foundations of ESG risks in ensuring sustainable finance: Practical study of the theoretical foundations of ESG risks. P4. The impact of ESG principles on the cost of capital and portfolio returns: Practical analysis of the impact of ESG principles on the cost of capital and portfolio returns. P5. Financial infrastructure and financial instruments in sustainable finance: Practical study of the financial infrastructure and instruments in sustainable finance. P6. Financial infrastructure and financial instruments in sustainable finance: Further practical study of the financial infrastructure and instruments in sustainable finance. P7. ESG-based governance by financial managers and shareholders in corporate structures: Practical analysis of ESG-based governance in corporate structures. P8. The role of ESG rating agencies in determining sustainability indicators: Practical study of the role of ESG rating agencies in determining sustainability indicators. P9. Corporate reporting aimed at sustainable development: Practical analysis of corporate reporting aimed at sustainable development. P10. Scientific foundations of the impact of climate change on financial stability: Practical study of the impact of climate change on financial stability. P11. Assessing risks associated with climate change: Practical assessment of risks associated with climate change. P12. Green financing and investment responsibility: Practical analysis of green financing and investment responsibility. P13. Social responsibility in financing sustainable development programs: Practical
--	--

	study of social responsibility in financing sustainable development programs. P14. Forming investment portfolios based on environmental principles: Practical formation of investment portfolios based on environmental principles. P15. Islamic finance as a model of sustainable development: Practical analysis of Islamic finance as a model of sustainable development. Self-Assignments: SA1. The ESG investment market and its essence: Independent study of the ESG investment market and its essence. SA2. ESG strategies and their formulation: Study of ESG strategies and their formulation. SA3. The ESG fund market: Examination of the ESG fund market. SA4. Green bonds: Study of green bonds. SA5. Social bonds: Study of social bonds. SA6. Sustainable alternative sources of financing: Analysis of sustainable alternative sources of financing. SA7. ESG private equity and debt funds: Study of ESG private equity and debt funds. SA8. Sustainable financial infrastructure: Examination of sustainable financial infrastructure. SA9. Forming stock and bond portfolios: Study of the formation of stock and bond portfolios. SA10. Data collection and analysis: Study of data collection and analysis. SA11. Interpreting and forecasting market trends: Analysis of the interpretation and forecasting of market trends. SA12. Net-zero investing: Study of net-zero investing. SA13. Dynamics of green financing and responsible investment in the market:
--	--

	Examination of the dynamics of green financing and responsible investment in the market. SA14. The international system of methodological support for responsible investment and green finance: Study of the international system of methodological support for responsible investment and green finance. SA15. The state of responsible investment and green financing in the country's financial market: Analysis of the state of responsible investment and green financing in the country's financial market. SA16. The market share of ESG investments: Study of the market share of ESG investments. SA17. Green budgeting and the prospects for its introduction in Uzbekistan: Examination of green budgeting and the prospects for its introduction in Uzbekistan. SA18. Gender budgeting and the prospects for its introduction in Uzbekistan: Study of gender budgeting and the prospects for its introduction in Uzbekistan. SA19. Issues in introducing the program-based (results-oriented) method of budget planning (using the example of a single sectoral ministry): Analysis of the issues in introducing the program-based (results-oriented) method of budget planning using the example of a single sectoral ministry. SA20. Types of participatory "Initiative Budgeting" and the relevance of its application in Uzbekistan: Study of the types of participatory "Initiative Budgeting" and the relevance of its application in Uzbekistan. SA21. Problems of Medium-Term Expenditure Framework (MTEF) budgeting in Uzbekistan: Examination of the problems of Medium-Term Expenditure Framework (MTEF) budgeting in Uzbekistan. SA22. Prospects for introducing the "Youth Budget" initiative in Uzbekistan: Study of the
--	---

	prospects for introducing the “Youth Budget” initiative in Uzbekistan. SA23. The Open Budget Index (OBI) as a comparative statistical tool: Analysis of the Open Budget Index (OBI) as a comparative statistical tool. SA24. The Open Budget Index and the problems of ensuring Uzbekistan’s participation in it, and ways to resolve them: Study of the Open Budget Index and the problems of ensuring Uzbekistan’s participation in it, and ways to resolve them. SA25. Issues in improving the “PI-5. Budget Documentation” indicator, based on the 2018 results of Uzbekistan’s PEFA Assessment: Examination of the issues in improving the “PI-5. Budget Documentation” indicator based on the 2018 results of Uzbekistan’s PEFA assessment. SA26. Issues in improving inter-budgetary relations in Uzbekistan: Study of the issues in improving inter-budgetary relations in Uzbekistan. SA27. Directions for improving the organizational structure of the Ministry of Finance of the Republic of Uzbekistan: Analysis of the directions for improving the organizational structure of the Ministry of Finance of the Republic of Uzbekistan. SA28. Issues in improving the Budget Code of the Republic of Uzbekistan: Study of the issues in improving the Budget Code of the Republic of Uzbekistan. SA29. Prospects for improving the medium-term fiscal strategy: Examination of the prospects for improving the medium-term fiscal strategy. SA30. Issues in improving the wage system of public administration bodies in Uzbekistan: Study of the issues in improving the wage system of public administration bodies in Uzbekistan.

Teaching Methods	The module is delivered through interactive lectures, practical exercises, and independent analytical work. Independent work is carried out in various forms, including writing essays and lecture outlines on given topics, preparing lecture materials, compiling glossaries, completing case assignments, working with information and analytical materials, translating sources, creating infographics, preparing conference abstracts, and developing multimedia presentations.
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student learning is assessed through tests, oral work, and written work. In line with the standard structure, performance is evaluated through continuous assessment (20%), midterm assessment (30%), and a final examination (50%). The continuous assessment evaluates active participation in lectures and practical lessons, seminar discussions, and the completion of independent work such as essays, glossaries, case assignments, infographics, and multimedia presentations on the topics of the course. The midterm assessment consists of written and oral tests together with the evaluation of structured independent study projects. The final examination is a comprehensive test of the theoretical and practical mastery of the course, covering the principles and characteristics of sustainable finance, the ESG ecosystem and ESG risks, the impact of ESG on the cost of capital and portfolio returns, financial infrastructure and instruments, ESG-based corporate governance and rating agencies, corporate sustainability reporting, climate-change risks, green financing and responsible investment, and Islamic finance as a model of sustainable development. Successful

	completion of all assigned independent study tasks is a prerequisite for taking the final examination. Grading criteria and assessment scale: Student academic achievement is evaluated on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student can fully explain the essence and content of the subject, maintains scientific rigor and logic while avoiding errors and confusion, has a clear understanding of the theoretical and practical significance of the subject materials, demonstrates independent thinking, answers questions clearly and concisely, carefully prepares outlines, completes all independent assignments fully and accurately, fully masters the laws and other regulatory legal documents related to the subject, publishes a scientific article on a related topic, and can explain historical processes. Good (70–89.9 points / Grade 4): The student understands the essence and content of the subject without scientific or logical confusion, understands the practical significance of the content, performs the tasks and assignments within the curriculum framework, correctly answers the questions given, carefully formulates outlines, fully completes independent assignments, and masters the laws and other regulatory documents related to the subject. Average / Satisfactory (60–69.9 points / Grade 3): The student has a general understanding of the subject, covers and explains topics in a narrow scope with some confusion, does not explain fluently, gives vague and confusing answers to questions, and does not properly formulate the subject text. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student shows no preparation, has no understanding of the subject, has copied
--	---

	the subject text from others, makes serious mistakes and confusion in the text, does not answer the questions asked, or does not know the subject.

Field	Description
Module Title	THE CONCEPT OF TEACHING ECONOMIC SCIENCES
Module Code	IFO'M2205
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	I semester
Module objective	The purpose of this module is to develop students' advanced understanding of the theoretical and methodological foundations of teaching economics, enabling them to design, implement, and evaluate effective economics instruction by applying contemporary

	pedagogical technologies, interactive teaching methods, assessment techniques, educational resources, and innovative approaches in higher education.
Module Learning Outcomes	Knowledge: LO1. Explain the theoretical foundations, concepts, principles, and objectives of teaching economics and their role in higher education. LO2. Interpret modern pedagogical approaches, instructional methods, and educational technologies used in economics teaching. LO3. Classify teaching methods, assessment techniques, educational resources, and curriculum components applied in economics education. Skills: LO4. Design and deliver lectures, seminars, and practical classes by applying learner-centered and interactive teaching methods in economics. LO5. Develop lesson plans, teaching materials, case studies, project-based learning activities, and classroom assessment tools for economics courses. LO6. Evaluate students' learning outcomes and apply appropriate assessment strategies, educational technologies, and instructional methods to improve the effectiveness of economics teaching. Competencies: LO7. Design and implement effective instructional strategies that integrate modern pedagogical technologies, innovative teaching methods, and digital learning resources in economics education. LO8. Analyze and solve pedagogical problems by selecting appropriate teaching methods, assessment techniques, and classroom management strategies for different economics topics and learning environments.

	LO9. Demonstrate professional competence in curriculum development, educational research, instructional design, and the continuous improvement of teaching and learning practices in economics education.
Content	Lectures: L1. Subject and scientific and practical foundations of the discipline of teaching methods of economic sciences: Examination of the theoretical, scientific, and practical foundations that guide the effective teaching and learning of economic sciences. L2. Pedagogical technology and teaching methods. Lectures in the study of economic sciences. Preparation for and conducting seminars and practical classes: Application of modern pedagogical technologies and instructional methods for planning and delivering lectures, seminars, and practical sessions in economics. L3. The method of dividing groups into pairs and small groups. Modeling practical games and research methods in the study of economic sciences: Development of collaborative learning through pair and group activities, educational games, and research-based teaching approaches. L4. Using the method of discussion and "brainstorming" in the study of economic sciences: Utilization of discussion and brainstorming techniques to promote critical thinking, problem-solving, and active participation in economics education. L5. Studying economic sciences based on the design and case study method: Application of project-based and case study methods to analyze real-world economic issues and strengthen practical competencies. L6. Writing problems, exercises, tests, essays during the lesson and using them in studying economics: Design and

	implementation of classroom assignments, exercises, tests, and essays to assess and reinforce students' understanding of economic concepts. L7. Methods that teach independent work on academic and scientific literature, comparison, and evaluation: Development of students' abilities to independently analyze, compare, and critically evaluate academic and scientific literature in economics. L8. Methods aimed at studying a subject based on logical thinking, information gathering, and dissemination: Application of instructional methods that enhance logical reasoning, information collection, analysis, and effective communication of economic knowledge. L9. Applying creative thinking and other methods in the study of economics: Integration of creative thinking strategies and innovative teaching methods to improve learning outcomes in economics. L10. Use of visual aids, handouts, and technical tools in teaching economics: Effective use of visual materials, instructional resources, and educational technologies to support economics teaching and learning. L11. Adapting methods according to the characteristics of the subject and topics: Selection and adaptation of teaching methods based on the specific content, objectives, and characteristics of economics topics. L12. Organization of independent work in the study of economic sciences: Planning and managing independent learning activities that foster students' analytical, research, and self-directed learning skills. L13. Qualification, pedagogical practice and requirements for its implementation: Examination of pedagogical practice
--	--

	requirements and professional competencies necessary for effective economics teaching. L14. Control and assessment of knowledge in the study of economic sciences: Application of assessment methods and evaluation strategies to measure students' knowledge, skills, and learning achievements in economics. L15. Educational and methodological complex in economic sciences. Methodology for their compilation and application in the educational process: Study of the development and effective use of educational and methodological materials to support the teaching and learning process in economic sciences. Practical lessons: P1. Subject and scientific and practical foundations of the discipline of teaching methods of economic sciences: Practical exercises and discussions focused on applying the theoretical, scientific, and practical foundations of teaching methods in economic sciences. P2. Pedagogical technology and teaching methods. Lectures in the study of economic sciences. Preparation for and conducting seminars and practical classes: Practical activities involving the design, preparation, and delivery of lectures, seminars, and practical classes using modern pedagogical technologies. P3. The method of dividing groups into pairs and small groups. Modeling practical games and research methods in the study of economic sciences: Collaborative tasks using pair work, small-group activities, educational games, and research-based learning techniques in economics.
--	--

	P4. Using the method of discussion and "brainstorming" in the study of economic sciences: Practical application of discussion and brainstorming methods to solve economic problems and encourage active student engagement. P5. Studying economic sciences based on the design and case study method: Project-based tasks and case study analyses designed to develop practical problem-solving and decision-making skills in economics. P6. Writing problems, exercises, tests, essays during the lesson and using them in studying economics: Practical development and evaluation of classroom assignments, exercises, tests, and essays for teaching and assessing economics. P7. Methods that teach independent work on academic and scientific literature, comparison, and evaluation: Practical activities focused on reviewing, comparing, and critically evaluating academic and scientific literature related to economics. P8. Methods aimed at studying a subject based on logical thinking, information gathering, and dissemination: Practical exercises that strengthen logical thinking, information collection, analysis, and presentation of economic knowledge. P9. Applying creative thinking and other methods in the study of economics: Practical application of creative thinking techniques and innovative instructional methods to address economic learning challenges. P10. Use of visual aids, handouts, and technical tools in teaching economics: Hands-on use of visual materials, instructional resources, and digital technologies to enhance economics teaching and learning. P11. Adapting methods according to the characteristics of the subject and topics:
--	--

	Practical adaptation of teaching methods to suit different economics topics, learning objectives, and classroom contexts. P12. Organization of independent work in the study of economic sciences: Practical planning, implementation, and evaluation of independent learning activities in economics education. P13. Qualification, pedagogical practice and requirements for its implementation: Practical preparation for pedagogical practice through lesson planning, classroom activities, and professional teaching exercises. P14. Control and assessment of knowledge in the study of economic sciences: Practical application of assessment techniques, grading methods, and evaluation tools to measure students' learning outcomes in economics. P15. Educational and methodological complex in economic sciences. Methodology for their compilation and application in the educational process: Practical development and application of educational and methodological materials to support effective teaching and learning in economic sciences. Self-Assignments: SA1. Independent mastery of topics using regulatory legal documents and educational literature: Independent study of financial market topics through the analysis of regulatory documents, academic literature, and professional sources; SA2. Preparing an abstract on topics: Preparation of analytical abstracts summarizing theoretical concepts, scientific approaches, and practical aspects of financial markets; SA3. Preparing for seminars and workshops: Systematic preparation for seminars and practical classes through
--	--

	reviewing financial market theories, solving analytical tasks, and discussing relevant issues; SA4. Preparation of scientific articles and theses: Development of scientific articles and conference theses focused on current problems and research areas in financial markets; SA5. Preparing projects that address current issues in science: Development of research projects aimed at analyzing modern financial market challenges, investment processes, and financial innovations; SA6. Applying theoretical knowledge in practice: Application of theoretical knowledge of financial markets, financial instruments, investment decisions, and risk management approaches to practical situations; SA7. Finding solutions to existing problems in practice: Identification and analysis of practical problems in financial markets and development of evidence-based solutions using financial methods; SA8. Writing annotations to key scientific literature on the topic being studied, etc.: Preparation of annotations and reviews of important scientific literature related to financial markets, investment activities, derivatives, and international financial systems.
Teaching Methods	The module is delivered through interactive lectures, practical teaching sessions, independent analytical assignments, lesson planning and micro-teaching activities, problem-solving tasks, case studies, project-based learning, group discussions, brainstorming techniques, and the application of modern pedagogical technologies and digital educational resources in economics education.
Prerequisites	Scientific research methodology (ITM 1105) Methodology of teaching special subjects (MFO'M 1105)
Exams and Assessment	Type of examination (written, oral, project) and its weight:

	Student performance is assessed through continuous assessment (20%), midterm assessment (30%), and a final written examination (50%). The continuous assessment (20%) evaluates students' active participation in lectures, seminar discussions, practical teaching exercises, classroom presentations, and the successful completion of foundational independent assignments. These activities include preparing lesson plans, analyzing teaching methods used in economics education, designing classroom activities based on discussion and brainstorming techniques, developing simple instructional materials, and evaluating the effectiveness of different pedagogical approaches for teaching economic sciences. The midterm assessment (30%) consists of written theoretical tests, short in-class quizzes, and the evaluation of structured independent study projects. Major assignments include designing an interactive economics lesson using modern pedagogical technologies, developing a case study or project-based learning activity, preparing assessment tools such as tests, essays, and classroom exercises, analyzing research literature on economics education, and producing a report on the application of innovative teaching methods in higher education. The final assessment (50%) is a comprehensive written examination consisting of theoretical questions and practical pedagogy-based tasks. Students are required to analyze teaching scenarios, prepare lesson plans, select appropriate instructional strategies, design assessment methods, and justify the application of modern teaching technologies for specific economics topics. The examination evaluates students' mastery of economics teaching
--	---

	concepts, pedagogical decision-making skills, curriculum planning, and the effective application of learner-centered instructional methods. Successful completion and submission of all assigned independent study tasks is a mandatory prerequisite for taking the final examination. Grading criteria and assessment scale: Student academic achievement is evaluated based on a 100-point grading scale mapped to standard performance criteria: xcellent (90–100 points / Grade 5): The student demonstrates a comprehensive and in-depth understanding of the concepts, principles, and methodologies of teaching economics, applies modern pedagogical technologies and instructional strategies accurately, demonstrates independent critical and analytical thinking, effectively designs lesson plans and assessment materials, successfully integrates innovative teaching methods into economics education, and completes all independent assignments with excellent academic quality. Good (70–89.9 points / Grade 4): The student demonstrates a solid understanding of the subject matter and its practical application in economics education, correctly applies appropriate teaching methods and assessment techniques, completes required coursework and independent assignments with only minor deficiencies, and effectively analyzes instructional problems and classroom situations. Average / Satisfactory (60–69.9 points / Grade 3): The student demonstrates a general understanding of the fundamental concepts of teaching economics but shows limited ability to apply pedagogical methods in practice. Lesson planning, instructional design, and assessment
--	--

	activities are completed with noticeable weaknesses or inconsistencies, and responses to theoretical and practical tasks lack sufficient depth. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student demonstrates insufficient knowledge of the concepts and methodologies of teaching economics, fails to apply appropriate pedagogical approaches, submits plagiarized or incomplete assignments, is unable to prepare lesson plans or instructional materials satisfactorily, or fails to meet the minimum requirements of the written examination and independent study task.

Field	Description
Module Title	FINANCIAL MARKETS 2
Module Code	MB2205
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours

	Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	III semester
Module objective	The purpose of this module is to develop students' advanced understanding of the theoretical and methodological foundations of teaching economics, enabling them to design, implement, and evaluate effective economics instruction by applying contemporary pedagogical technologies, interactive teaching methods, assessment techniques, educational resources, and innovative approaches in higher education.
Module Learning Outcomes	Knowledge: LO1. Explain the structure, functions, and mechanisms of financial markets, including money markets, capital markets, foreign exchange markets, and international financial markets. LO2. Analyze the characteristics, roles, and valuation principles of major financial instruments, including stocks, bonds, derivatives, and alternative investment assets. LO3. Understand the activities of financial market participants, financial institutions, regulatory frameworks, and the processes of capital mobilization and allocation in modern financial systems. Skills: LO4. Apply financial analysis methods to evaluate debt instruments, borrowing approaches, financial statements, capital forecasts, and investment decision-making processes. LO5. Assess risks and returns associated with derivatives, alternative assets, Islamic financial instruments, and international financial market operations. LO6. Analyze financial market trends, interest rates, inflation, exchange rate movements, and

	their impact on investment decisions and economic development. Competencies: LO7. Evaluate financial market conditions and develop informed decisions related to capital allocation, investment strategies, and risk management. LO8. Apply theoretical and analytical knowledge of national and international financial markets to solve practical problems related to financial instruments and market activities. LO9. Demonstrate professional competence in analyzing global financial market developments, regulatory changes, financial innovations, and their implications for economic and investment decisions.
Content	Lectures: L1. Amount of debts basis: Examination of the fundamental concepts, determinants, and measurement of debt levels and their impact on corporate financing decisions. L2. Amount of debts basis: Analysis of debt capacity, capital structure considerations, and the factors influencing optimal borrowing decisions. L3. To borrow related approaches: Study of the major borrowing approaches and financing alternatives used by organizations to meet capital requirements. L4. To borrow related approaches: Evaluation of borrowing strategies, lending conditions, and financial decision-making techniques for effective debt management. L5. Financial statements: analysis and forecasts for capital: Application of financial statement analysis to assess capital structure, financial performance, and future financing needs. L6. Financial statements: analysis and forecasts for capital: Development of financial

	forecasting techniques to support capital planning and long-term investment decisions. L7. Capital valuation and investment decisions: Examination of capital valuation methods and investment appraisal techniques for maximizing firm value. L8. Capital valuation and investment decisions: Analysis of investment decision-making models, capital budgeting techniques, and project evaluation methods. L9. Derivatives: Study of derivative financial instruments and their applications in hedging, speculation, and risk management. L10. Derivatives: Evaluation of derivative pricing principles and their role in modern financial markets and portfolio management. L11. Alternative assets: Analysis of alternative asset classes, including private equity, hedge funds, real estate, and commodities as investment opportunities. L12. Alternative assets: Evaluation of the risk-return characteristics and portfolio diversification benefits of alternative investments. L13. Islam financial markets: Examination of the principles, institutions, and financial instruments of Islamic financial markets based on Shariah principles. L14. Islam financial markets: Analysis of Islamic banking products, Sukuk markets, and Shariah-compliant investment practices in global finance. L15. International markets: Study of the structure, operations, and integration of international financial markets and their influence on global capital movements. Practical lessons: P1. Amount of debts basis: Practical analysis of debt measurement methods and the factors
--	---

	affecting debt levels using corporate financing cases. P2. Amount of debts basis: Application of debt capacity and capital structure analysis to evaluate optimal borrowing decisions in real-world scenarios. P3. To borrow related approaches: Practical comparison of borrowing approaches and financing alternatives for meeting organizational capital needs. P4. To borrow related approaches: Case-based evaluation of borrowing strategies, lending conditions, and debt management decisions. P5. Financial statements: analysis and forecasts for capital: Practical application of financial statement analysis to assess capital requirements and financial performance. P6. Financial statements: analysis and forecasts for capital: Development of financial forecasts to support capital planning and long-term financing decisions. P7. Capital valuation and investment decisions: Practical application of capital valuation methods and investment appraisal techniques to business projects. P8. Capital valuation and investment decisions: Analysis of investment opportunities using capital budgeting and project evaluation methods. P9. Derivatives: Practical exercises on the use of derivative instruments for hedging financial risks and managing investment portfolios. P10. Derivatives: Application of derivative pricing concepts and portfolio management strategies through financial case studies. P11. Alternative assets: Practical evaluation of alternative asset classes and their role in portfolio diversification and investment management.
--	--

	P12. Alternative assets: Analysis of the risk-return characteristics of alternative investments using real-world investment scenarios. P13. Islam financial markets: Practical examination of Islamic financial instruments and Shariah-compliant investment practices through case analysis. P14. Islam financial markets: Comparative analysis of Islamic banking products, Sukuk markets, and conventional financial instruments. P15. International markets: Practical analysis of international financial market operations and their impact on global investment and capital flows. Self-Assignments: SA1. Debts quantitative basis: Independent analysis of quantitative methods for measuring debt levels, leverage indicators, and their impact on financial decision-making; SA2. To borrow related approaches: Study of borrowing strategies, financing alternatives, and approaches to effective debt management in organizations; SA3. Financial reports: capital for analysis and forecasts: Analysis of financial reports and forecasting methods to evaluate capital structure and future financial requirements; SA4. Capital assessment and investment decisions: Evaluation of capital assessment methods and investment decision-making approaches for improving financial performance; SA5. Derivatives: Independent study of derivative financial instruments, their valuation methods, and applications in risk management and investment activities; SA6. Alternative assets: Analysis of alternative investment assets, their
--	--

	characteristics, risk-return relationships, and role in portfolio diversification; SA7. Islam finance markets: Examination of Islamic financial market principles, instruments, and Shariah-compliant investment practices; SA8. International markets: Study of international financial markets, global capital flows, and their influence on investment and financing decisions.
Teaching Methods	The module is delivered through interactive lectures, practical financial analysis sessions, independent research assignments, problem-solving activities, investment case studies, market analysis exercises, portfolio management simulations, and the use of modern financial technologies and market data platforms.
Prerequisites	Sustainable finance (BAM1205) Budget tax policy BSS 1105
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student performance is assessed through continuous assessment (20%), midterm assessment (30%), and a final written examination (50%). The continuous assessment (20%) evaluates students' active participation in lectures, seminar discussions, practical financial analysis exercises, problem-solving activities, and the completion of fundamental independent assignments. These activities include analyzing debt levels and borrowing strategies, evaluating financial statements, performing capital assessment exercises, studying investment decision-making processes, analyzing derivative instruments, and discussing the role of alternative assets, Islamic finance markets, and international financial markets. The midterm assessment (30%) consists of written theoretical tests, short in-class quizzes, and the evaluation of structured independent

	study projects. Major assignments include conducting financial market analysis, preparing reports on capital structure and investment decisions, evaluating borrowing approaches, analyzing derivative instruments and risk management strategies, comparing alternative investment assets, and preparing analytical reviews of Islamic finance markets and international financial market developments. The final assessment (50%) is a comprehensive written examination consisting of theoretical questions and practical financial market tasks. Students are required to analyze financial market scenarios, evaluate investment opportunities, apply capital valuation methods, assess debt and borrowing decisions, analyze derivative instruments, and interpret global financial market trends. The examination evaluates students' understanding of financial market principles, analytical and quantitative decision-making skills, investment evaluation abilities, and capacity to apply financial theories to real-world market situations. Successful completion and submission of all assigned independent study tasks is a mandatory prerequisite for taking the final examination. Grading criteria and assessment scale: Student academic achievement is evaluated based on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student demonstrates a comprehensive and advanced understanding of financial market concepts, including debt analysis, borrowing approaches, capital valuation, investment decisions, derivatives, alternative assets, Islamic finance markets, and international markets. The student applies financial theories and analytical methods accurately, demonstrates independent critical thinking,
--	--

	solves complex financial problems, and completes all independent assignments with high academic quality. Good (70–89.9 points / Grade 4): The student demonstrates a strong understanding of financial market principles and their practical applications, correctly analyzes financial data, evaluates investment and financing decisions, completes required coursework and independent assignments with minor errors, and provides appropriate solutions to financial market problems. Average / Satisfactory (60–69.9 points / Grade 3): The student demonstrates a basic understanding of financial market concepts but has limited ability to apply theoretical knowledge to practical situations. Analysis of financial instruments, investment decisions, and market processes is incomplete or contains some inaccuracies. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student demonstrates insufficient knowledge of financial market concepts, fails to analyze financial instruments and market processes, submits incomplete or plagiarized assignments, makes significant analytical errors, or fails to answer examination questions adequately.

----------------------	--

Field	Description
Module Title	PUBLIC FINANCE MANAGEMENT
Module Code	DMB2205
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	II semester (first-year master's degree)
Module objective	The objective of the Public Finance Management module is to develop students' knowledge and skills for the rational organization and effective management of the financial relations arising from the finances of the state budget, extra-budgetary state funds and state enterprises, ensuring the stability of local budget revenues and the effective distribution of their expenditures within the redistribution of the gross domestic product.
Module Learning Outcomes	Knowledge: LO1. Explain the significance, composition and management of public finance, including local budget revenues and expenditures, budget estimate planning, budget deficit factors, the essence of fiscal policy, the principles of financial policy, and the methods for assessing the sufficiency of budget-system funds. LO2. Interpret the financial analysis of public finance prospects, the criteria for evaluating budget-system performance, the structure of budget execution reporting, and the international standards of effective public finance management.

	LO3. Organize the analysis of local and republican budgets, prepare and analyze the budget draft, assess the revenues and expenditures of public finance units, determine regional ratings based on local budget analysis, manage local budgets according to international budget practice, and identify the development prospects of public finance, the state budget and corporations. Skills: LO4. Apply the strategic approach to the budget deficit and the measures for reducing it, the main principles of public finance management, the analysis of the organizational-legal foundations of budget-system units, and the methods of assessing their potential, the effective use of their resources, and the targeted management of their expenditures. Competencies: LO5. Organize the operational, current and long-term planning of the state budget and prepare the budget draft. LO6. Analyze the financial condition of the republican budget, local budgets and extra-budgetary funds. LO7. Assess the expenditures and revenues of the units of the public finance system. LO8. Apply the international system of effective public finance management and budget practice. LO9. Determine the development prospects of public finance, the state budget and corporations.
Content	Lectures: L1. Features of managing and regulating public finance: Examination of the features of managing and regulating public finance and its role in the redistribution of the gross domestic product. L2. State regulation of the economy: main instruments and methods: Study of the main instruments and methods through which the state

	regulates the economy and their impact on public finance. L3. Managing the financial resources of state enterprises: formation and use: Analysis of the formation and use of the financial resources of state enterprises and the management of their finances. L4. Budget structure and the budget process in Uzbekistan: Exploration of the budget structure and the stages of the budget process in Uzbekistan. L5. Revenues and expenditures of the republican and local budgets: Study of the composition of the revenues and expenditures of the republican and local budgets and their management. L6. Issues of managing state credit and debt: Examination of the issues of managing state credit and public debt and the mechanisms for controlling debt levels. L7. The role of extra-budgetary state targeted funds in socio-economic development: Analysis of the role of extra-budgetary state targeted funds in socio-economic development. L8. The Pension Fund and ways of using it effectively: Study of the formation and effective use of the resources of the Pension Fund. L9. Revenues and expenditures of the State Fund for the Support of Employment: Examination of the revenues and expenditures of the State Fund for the Support of Employment. L10. Revenues and expenditures of other extra-budgetary state targeted funds: Study of the revenues and expenditures of other extra-budgetary state targeted funds. L11. Revenues and expenditures of the Reconstruction and Development Fund of the Republic of Uzbekistan: Analysis of the revenues and expenditures of the Reconstruction and Development Fund of the Republic of Uzbekistan.
--	---

	Practical lessons: P1. Features of managing and regulating public finance: Practical analysis of the mechanisms for managing and regulating public finance using real budget data. P2. State regulation of the economy: main instruments and methods: Practical exercises evaluating the instruments and methods of state economic regulation. P3. Managing the financial resources of state enterprises: formation and use: Practical analysis of the formation and use of the financial resources of state enterprises. P4. Budget structure and the budget process in Uzbekistan: Practical study of the budget process in Uzbekistan through the stages of drafting and executing the budget. P5. Revenues and expenditures of the republican and local budgets: Practical calculations of the revenues and expenditures of the republican and local budgets. P6. Issues of managing state credit and debt: Practical analysis of state credit and debt management using case studies. P7. The role of extra-budgetary state targeted funds in socio-economic development: Practical assessment of the role and use of extra-budgetary state targeted funds. P8. The Pension Fund and ways of using it effectively: Practical analysis of the revenues, expenditures and effective use of the Pension Fund. P9. Revenues and expenditures of the State Fund for the Support of Employment: Practical study of the revenues and expenditures of the State Fund for the Support of Employment. P10. Revenues and expenditures of other extra-budgetary state targeted funds: Practical analysis of the revenues and expenditures of other extra-budgetary state targeted funds.
--	---

	P11. Revenues and expenditures of the Reconstruction and Development Fund of the Republic of Uzbekistan: Practical analysis of the revenues and expenditures of the Reconstruction and Development Fund. Self-Assignments: SA1. Contemporary tasks and problems of public finance management: Independent study of the contemporary tasks and problems of public finance management. SA2. The role of state financial bodies in public finance management: Independent examination of the role of state financial bodies in public finance management. SA3. The methodological and organizational processes of forming the financial system: Study of the methodological and organizational processes of forming the financial system. SA4. Financial institutions: theory, methodology, and laws of development: Analysis of financial institutions in terms of theory, methodology and the laws of their development. SA5. The main directions of public finance and social policy: Study of the main directions of public finance and social policy. SA6. Optimizing the budget process: improving the system of managing the revenues and expenditures of the budget system and extra-budgetary funds: Independent study of optimizing the budget process and improving the management of budget and extra-budgetary revenues and expenditures. SA7. The priorities and conceptual foundations of tax policy and the main directions of reforming the modern tax system of Uzbekistan: Examination of the priorities and conceptual foundations of tax policy and the reform of Uzbekistan's tax system.
--	--

	SA8. The concept and systematic analysis of public finance: Study of the concept and systematic analysis of public finance. SA9. The state's fiscal (budget-tax) policy in a market economy: Analysis of the state's fiscal (budget-tax) policy in a market economy. SA10. Issues of ensuring the continuity of state budget revenues: Independent study of the issues of ensuring the continuity of state budget revenues. SA11. Issues of the effective use of the financial resources of the state's targeted funds: Study of the effective use of the financial resources of the state's targeted funds. SA12. World experience of reforming the pension system and the possibilities of using it in Uzbekistan: Comparative study of world experience in reforming the pension system and its application in Uzbekistan. SA13. Improving the forecasting of state budget revenues: Independent study of improving the forecasting of state budget revenues. SA14. Directions for increasing the efficiency of financing investment processes in conditions of economic modernization: Study of the directions for increasing the efficiency of financing investment processes under economic modernization. SA15. Ways of ensuring the effective execution of local budget expenditures: Examination of the ways of ensuring the effective execution of local budget expenditures. SA16. The role of fiscal (budget-tax) policy in strengthening state budget revenues: Analysis of the role of fiscal (budget-tax) policy in strengthening state budget revenues. SA17. Issues of the effective organization and management of the activity of state targeted funds: Study of the effective organization and
--	--

	management of the activity of state targeted funds. SA18. Improving the mechanism for forming the revenues of the extra-budgetary Pension Fund: Independent study of improving the mechanism for forming the revenues of the extra-budgetary Pension Fund. SA19. Improving financial control in the formation and execution of local budgets: Examination of improving financial control in the formation and execution of local budgets. SA20. Ways of improving state financial control in conditions of economic liberalization: Study of the ways of improving state financial control under economic liberalization. SA21. Issues of financing the investment projects of small business and private entrepreneurship entities: Analysis of the issues of financing the investment projects of small business and private entrepreneurship. SA22. Effective management of state debt as the main factor in ensuring the stability of public finance: Study of the effective management of state debt as a factor in ensuring the stability of public finance.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, and independent analytical work. Independent work is carried out in various forms, including writing essays and lecture outlines on given topics, preparing lecture materials, compiling glossaries, completing case assignments, working with information and analytical materials, translating sources, creating infographics, preparing conference abstracts, and developing multimedia presentations.
Prerequisites	Sustainable finance (BAM1205) Management finance (BOM1105) Financial risk management (MROB1205)

Exams and Assessment	Type of examination (written, oral, project) and its weight: Student learning is assessed through tests, oral work, and written work. In line with the standard structure, performance is evaluated through continuous assessment (20%), midterm assessment (30%), and a final examination (50%). The continuous assessment evaluates active participation in lectures and practical lessons, seminar discussions, and the completion of independent work such as essays, glossaries, case assignments, infographics, and multimedia presentations on the topics of the course. The midterm assessment consists of written and oral tests together with the evaluation of structured independent study projects. The final examination is a comprehensive test of the theoretical and practical mastery of the course, covering the management and regulation of public finance, state economic regulation, the finances of state enterprises, the budget structure and process in Uzbekistan, the revenues and expenditures of the republican and local budgets, state credit and debt, and the extra-budgetary state targeted funds. Successful completion of all assigned independent study tasks is a prerequisite for taking the final examination. Grading criteria and assessment scale: Student academic achievement is evaluated on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student can fully explain the essence and content of the subject, maintains scientific rigor and logic while avoiding errors and confusion, has a clear understanding of the theoretical and practical significance of the subject materials, demonstrates independent thinking, answers questions clearly and concisely, carefully prepares outlines, completes all independent assignments fully and accurately, fully masters
-----------------------------	---

	the laws and other regulatory legal documents related to the subject, publishes a scientific article on a related topic, and can explain historical processes. Good (70–89.9 points / Grade 4): The student understands the essence and content of the subject without scientific or logical confusion, understands the practical significance of the content, performs the tasks and assignments within the curriculum framework, correctly answers the questions given, carefully formulates outlines, fully completes independent assignments, and masters the laws and other regulatory documents related to the subject. Average / Satisfactory (60–69.9 points / Grade 3): The student has a general understanding of the subject, covers and explains topics in a narrow scope with some confusion, does not explain fluently, gives vague and confusing answers to questions, and does not properly formulate the subject text. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student shows no preparation, has no understanding of the subject, has copied the subject text from others, makes serious mistakes and confusion in the text, does not answer the questions asked, or does not know the subject.

Field	Description
Module Title	FINANCIAL STATEMENT ANALYSIS
Module Code	MHT 2205
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	II semester (first-year master's degree)
Module objective	The objective of the Financial Statement Analysis module is to develop in students theoretical knowledge and practical skills for analyzing the financial position, performance results, and cash flows of enterprises and organizations, and to form their ability to correctly interpret financial statement indicators, identify the factors influencing them, and assess financial risks and opportunities, thereby enabling them to make sound and well-grounded financial management decisions.
Module Learning Outcomes	Knowledge: LO1. Explain the theoretical foundations, subject, object, and methodology of financial statement analysis, as well as the simple-traditional methods (comparison, calculation of average and relative indicators, grouping, and the balance-linkage method) and economic-mathematical methods (integral, correlation-regression analysis). LO2. Master the methodology of analyzing financial statement indicators and correctly select and apply the appropriate methods in solving practical problems. Skills:

	LO3. Apply methods of analyzing financial statement indicators in practice. LO4. Assess the financial condition of an enterprise based on the balance sheet and its structure. LO5. Analyze the dynamics and turnover of receivables and payables. LO6. Carry out factor analysis of financial results and profitability indicators. LO7. Analyze cash flows and changes in equity. Competencies: LO8. Assess the financial condition of enterprises and organizations based on their financial statements. LO9. Develop sound managerial decisions using financial analysis methods and tools. LO10. Identify financial risks and opportunities and provide recommendations for improving the efficiency of enterprise operations.
Content	Lectures: L1. Theoretical foundations of financial statement analysis: Examination of the subject, object, purpose and methodology of financial statement analysis and its role in financial management. L2. The method and techniques of financial statement analysis: Study of the traditional and economic-mathematical methods and techniques used in financial statement analysis. L3. Analysis of the volume of production and sales of products (works, services) of business entities: Analysis of the volume, structure and dynamics of the production and sales of products, works and services. L4. Analysis of fixed assets: Study of the composition, structure, movement and efficiency of the use of fixed assets. L5. Analysis of the provision of material resources: Examination of the enterprise's

	provision of material resources and the efficiency of their use. L6. Analysis of the provision of labor resources and labor productivity: Analysis of the provision of labor resources, staff movement and labor productivity. L7. Analysis of production costs and period expenses: Study of the composition and dynamics of production costs and period expenses and the factors affecting them. L8. Analysis of the balance sheet: Examination of the structure of the balance sheet and the assessment of liquidity, solvency and financial stability. L9. Analysis of receivables and payables: Analysis of the composition, dynamics and turnover of receivables and payables. L10. Analysis of financial results and profitability: Study of the formation of financial results and the factor analysis of profit and profitability indicators. L11. Analysis of cash flows: Examination of cash flows from operating, investing and financing activities. L12. Analysis of equity: Analysis of the composition, structure and changes in the enterprise's equity. Practical lessons: P1. Theoretical foundations of financial statement analysis: Practical exercises applying the theoretical foundations and methodology of financial statement analysis. P2. The method and techniques of financial statement analysis: Practical application of the methods and techniques of financial statement analysis to sample data. P3. Analysis of the volume of production and sales of products (works, services) of business entities: Practical analysis of the
--	--

	volume of production and sales of products, works and services. P4. Analysis of fixed assets: Practical calculations analyzing the composition and efficiency of the use of fixed assets. P5. Analysis of the provision of material resources: Practical assessment of the provision and use of material resources. P6. Analysis of the provision of labor resources and labor productivity: Practical analysis of labor resources provision, staff turnover and labor productivity. P7. Analysis of production costs and period expenses: Practical calculations of production costs and period expenses and the factors affecting them. P8. Analysis of the balance sheet: Practical analysis of the balance sheet and the assessment of liquidity and solvency. P9. Analysis of receivables and payables: Practical calculations of the turnover and dynamics of receivables and payables. P10. Analysis of financial results and profitability: Practical factor analysis of financial results and profitability indicators. P11. Analysis of cash flows: Practical analysis of cash flows from operating, investing and financing activities. P12. Analysis of equity: Practical analysis of the composition and changes in equity. Self-Assignments: SA1. Contemporary tasks and problems of financial statement analysis: Independent study of the contemporary tasks and problems of financial statement analysis. SA2. The simple and traditional methods used in financial statement analysis: comparison, calculation of average and relative indicators: Study of the simple and
--	---

	traditional methods used in financial statement analysis. SA3. The necessity of applying economic-mathematical methods in financial statement analysis: Examination of the necessity of applying economic-mathematical methods in financial statement analysis. SA4. The content and tasks of analyzing the volume of production and sales of products (works, services): Study of the content and tasks of analyzing the volume of production and sales of products, works and services. SA5. Analysis of marketing activity and product quality: Analysis of marketing activity and product quality. SA6. Analysis of the composition, structure and dynamics of fixed assets: Study of the composition, structure and dynamics of fixed assets. SA7. Analysis of the fulfillment of the enterprise's material and technical supply plan: Analysis of the fulfillment of the enterprise's material and technical supply plan. SA8. Analysis of the enterprise's provision of labor resources and staff turnover: Study of the enterprise's provision of labor resources and staff turnover. SA9. Analysis of product cost and classification of expenses: Examination of product cost and the classification of expenses. SA10. Analysis of the liquidity and solvency of the balance sheet: Analysis of the liquidity and solvency of the balance sheet. SA11. Financial stability indicators and their analysis: Study of financial stability indicators and their analysis. SA12. Analysis of receivables and payables by maturity: Analysis of receivables and payables by maturity. SA13. Analysis of gross profit from product sales and the factors affecting it: Study of
--	--

	gross profit from product sales and the factors affecting it. SA14. Analysis of profitability indicators and the factors affecting them: Analysis of profitability indicators and the factors affecting them. SA15. Analysis of cash flows from operating, investing and financing activities: Study of cash flows from operating, investing and financing activities.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, and independent analytical work. Independent work is carried out in various forms, including writing essays and lecture outlines on given topics, preparing lecture materials, compiling glossaries, completing case assignments, working with information and analytical materials, translating sources, creating infographics, preparing conference abstracts, and developing multimedia presentations.
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student learning is assessed through tests, oral work, and written work. In line with the standard structure, performance is evaluated through continuous assessment (20%), midterm assessment (30%), and a final examination (50%). The continuous assessment evaluates active participation in lectures and practical lessons, seminar discussions, and the completion of independent work such as essays, glossaries, case assignments, infographics, and multimedia presentations on the topics of the course. The midterm assessment consists of written and oral tests together with the evaluation of structured independent study projects.

	The final examination is a comprehensive test of the theoretical and practical mastery of the course, covering the theoretical foundations and methods of financial statement analysis, the analysis of production and sales, fixed assets, material and labor resources and costs, the balance sheet, receivables and payables, financial results and profitability, cash flows, and equity. Successful completion of all assigned independent study tasks is a prerequisite for taking the final examination. Grading criteria and assessment scale: Student academic achievement is evaluated on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student can fully explain the essence and content of the subject, maintains scientific rigor and logic while avoiding errors and confusion, has a clear understanding of the theoretical and practical significance of the subject materials, demonstrates independent thinking, answers questions clearly and concisely, carefully prepares outlines, completes all independent assignments fully and accurately, fully masters the laws and other regulatory legal documents related to the subject, publishes a scientific article on a related topic, and can explain historical processes. Good (70–89.9 points / Grade 4): The student understands the essence and content of the subject without scientific or logical confusion, understands the practical significance of the content, performs the tasks and assignments within the curriculum framework, correctly answers the questions given, carefully formulates outlines, fully completes independent assignments, and masters the laws and other regulatory documents related to the subject.
--	---

	Average / Satisfactory (60–69.9 points / Grade 3): The student has a general understanding of the subject, covers and explains topics in a narrow scope with some confusion, does not explain fluently, gives vague and confusing answers to questions, and does not properly formulate the subject text. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student shows no preparation, has no understanding of the subject, has copied the subject text from others, makes serious mistakes and confusion in the text, does not answer the questions asked, or does not know the subject.

2nd ACADEMIC YEAR

Field	Description
Module Title	PUBLIC DEBT POLICY
Module Code	DQS2305
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	II semester
Module objective	Expanding students' opportunities to gain independent knowledge about public debt management, studying the existing problems in public debt management practice, and identifying ways to address them involves forming theoretical hypotheses based on the content and significance of public debt management, drawing conclusions based on reliable results, and developing a scientific worldview on the macro and micro aspects of public debt management.
Module Learning Outcomes	Knowledge: LO1. Indicators defining the country's financial condition can be analyzed. LO2. Budget and tax system, banking, and external economic activity debt-related indicators can be identified and assessed. LO3. Factors influencing the formation of public debt can be analyzed, and recommendations can be developed to eliminate them and ensure sustainable financial stability. Skills: LO4. An understanding is gained of the causes and condition of public debt and its importance in ensuring the stability of the financial system. LO5. An understanding is developed of decision-making processes related to public debt management. LO6. Knowledge is acquired of the fundamentals of public debt management,

	economic laws, concepts, categories, and the characteristics of economic processes, as well as their application. Competencies: LO7. Knowledge is acquired of the fundamentals of state debt policy, including economic laws, concepts, categories, and the characteristics of economic processes, as well as their application. LO8. The main aspects of effective management of the country's internal and external debt are analyzed and evaluated. LO9. The organizational and economic foundations of foreign economic activity in public debt management are studied.
Content	Lectures: L1. The subject, purpose, and tasks of the state debt policy: The theoretical foundations, topics, goals, and tasks of public debt policy are explained. The economic nature of public debt, its role in government finances, the government's domestic and foreign debts, and the principles of forming debt policy are studied. L2. Budget deficit and its sources of financing: The economic nature of the state budget deficit, its causes, and macroeconomic consequences are studied. The internal and external sources of financing the budget deficit, the issuance of government securities, loans from international financial institutions, state guarantees, and other financing mechanisms, as well as their advantages and limitations, are explained. Additionally, the practice of managing the budget deficit in the Republic of Uzbekistan and international experience is also considered. L3. State budget deficit and debt-based financing policy: The theoretical and practical foundations of financing the state budget deficit through borrowing are studied. Principles of managing state debt, ensuring debt

	sustainability, strengthening fiscal discipline, and the impact of debt burden on macroeconomic indicators are discussed. In addition, the practice of financing the budget deficit through debt in the Republic of Uzbekistan, as well as international experience, is analyzed. L4. The essence of Uzbekistan's domestic public debt, its factors, repayment sources, and management: The economic nature of domestic public debt in the Republic of Uzbekistan, its causes, and its role in the state finance system have been studied. Factors that form domestic public debt, the tools used to attract it, principles for the efficient use of debt funds, and sources for repaying debts are covered. In addition, legal, institutional, and financial mechanisms for managing domestic public debt, ensuring debt sustainability, reducing financial risks, and applying the best practices from international experience are also explained. L5. The essence of external public debt, its factors, repayment sources, and management: The internal and external factors that shape the country's external debt are explained, as well as the mechanisms for borrowing from international financial institutions and foreign financial markets. In addition, the sources for repaying external debt, effective debt portfolio management, reducing currency and interest rate risks, ensuring debt sustainability, and the legal and institutional foundations of managing the state external debt of the Republic of Uzbekistan are discussed. L6. The role of public credit in the public finance system and its importance in forming and managing public debt: The study looks at the economic functions of state credit and its role in the government's financial system. It covers the importance of state credit
--	---

	in forming government debt, the mechanisms for attracting domestic and foreign loans, and the principles for effectively using state credit. It also highlights the impact of state credit on fiscal policy, macroeconomic stability, and investment development, as well as its role in managing government debt, optimizing debt portfolios, and modern approaches to managing debt risks. L7. International experience in public debt and debt management: The modern approaches, principles, and institutional mechanisms of managing public debt in developed and developing countries are studied. The experiences of managing public debt in the USA, Japan, EU countries, and other nations are discussed, as well as methods for diversifying debt portfolios, ensuring debt sustainability, and managing budget risks. L8. Public debt management practices in the Republic of Uzbekistan: The current system for managing state debt in the Republic of Uzbekistan, along with its legal foundations and institutional mechanisms, has been studied. The processes of attracting, recording, monitoring, and servicing state debt have been discussed, as well as the principles for managing the debt portfolio and ensuring the sustainability of state debt. In addition, the role of the Ministry of Economy and Finance and other authorized bodies in managing state debt, medium- and long-term debt strategies, financial risk management, and the importance of international standards and best practices in the context of Uzbekistan's experience have been highlighted. Practical lessons: P1. The subject, purpose, and tasks of the state debt policy: The main concepts of government debt policy, the types of
--	---

	government debt and their impact on the economy, as well as problematic situations and practical examples, are analyzed. P2. Budget deficit and its sources of financing: Practical tasks are carried out to calculate and analyze budget deficit indicators, assess their impact on the economy, and determine the efficiency of funding sources. Students compare different methods of financing the budget deficit and discuss their impact on national debt, inflation, and economic growth. In addition, practical cases on managing the budget deficit are analyzed based on the experience of Uzbekistan and other countries, and scientific conclusions are drawn. P3. State budget deficit and debt-based financing policy: The practical aspects of financing the state budget deficit through borrowed funds are analyzed. This includes evaluating the composition, value, and economic efficiency of domestic and foreign debts, calculating key indicators of the debt burden, and analyzing debt sustainability. This lesson helps master's students develop practical skills in analyzing state debt policy and making sound decisions. P4. The essence of Uzbekistan's domestic public debt, its factors, repayment sources, and management: They handle practical tasks related to government securities and domestic debt instruments and assess their effectiveness. They also analyze the government's domestic debt indicators and use metrics to evaluate debt sustainability. In addition, problematic situations (case studies) are discussed based on existing domestic debt management mechanisms and international experience, and scientific-practical conclusions are drawn. P5. The essence of external public debt, its factors, repayment sources, and
--	--

	management: The composition, dynamics, and key indicators of the foreign debt of the Republic of Uzbekistan are analyzed. Students complete practical tasks to assess the impact of foreign debt on economic growth, the state budget, and the balance of payments, calculate debt sustainability indicators, and determine the efficiency of sources for repaying foreign debt. P6. The role of public credit in the public finance system and its importance in forming and managing public debt: Practical examples and problematic situations related to the role of state credit are analyzed. Students complete practical tasks on the main forms of state credit, internal and external debt instruments, evaluate their advantages and limitations, analyze the composition of the debt portfolio, and determine the efficiency of using state credit. P7. International experience in public debt and debt management: Experiences of managing public debt in different countries are compared and analyzed. Public debt indicators, measures to assess debt sustainability, and methods for managing debt portfolios are evaluated based on practical data. In addition, similarities and differences between international practices and Uzbekistan's experience are identified, and suggestions and recommendations are developed to improve the efficiency of public debt management. P8. Public debt management practices in the Republic of Uzbekistan: The structure, dynamics, and main indicators of the public debt of the Republic of Uzbekistan are analyzed based on practical data. They perform practical tasks such as analyzing statistical data on public debt, assessing debt sustainability indicators, determining the ratio of domestic to external debt, and evaluating the efficiency of the debt portfolio. The problems encountered in
--	---

	public debt management practices in Uzbekistan and ways to solve them are discussed, and scientific and practical recommendations are developed based on international experience. Self-Assignments: SA1. The importance of public debt: The importance of national debt in economic development, the stability of the state budget, and the financing of investment projects are studied independently. SA2. Strategies for managing internal and external debt in state financial policy: In state financial policy, the goals, principles, and priorities of the strategy for managing internal and external debts are studied independently. SA3. The essence of the state budget deficit, it's factors, and its management: The economic state of the government budget deficit, the internal and external factors causing it, and its macroeconomic consequences are studied independently. SA4. Sources of financing the state budget deficit and their management: The main sources for financing the state budget deficit, their economic situation, and the ways to use them are studied independently. The advantages and risks of domestic and foreign debt funds, government securities, and other financing tools are analyzed. SA5. Forms of international credit and their impact on the formation of external debt: The main types of international credits, their economic essence, and their role in shaping the country's external debt are studied independently. The characteristics, advantages, and risks of credits obtained from international financial institutions, foreign governments, and international capital markets are analyzed.
--	--

	SA6. Sources of financing state internal debt: The main sources of financing the country's internal debt, their economic nature, and their role in public finance are examined. The characteristics of government securities, commercial banks, financial institutions, and other domestic financing instruments, as well as mechanisms for using them effectively, are analyzed. SA7. Ways of financing state external debt: Methods of raising funds through international financial institutions, foreign governments, international capital markets, and government debt bonds are analyzed. In addition, the effective use of external debt funds, ensuring debt sustainability, and modern approaches to external debt management are studied independently based on Uzbekistan's and international experience. SA8. The main directions of public debt management in the modern economy: Independently studies issues like optimizing the government debt portfolio, ensuring debt sustainability, managing financial and economic risks, and making effective use of debt funds. SA9. The relationship between budget deficit and crisis: The impact of the budget deficit on economic growth, inflation, public debt, and macroeconomic stability is analyzed. In addition, during economic crises, modern approaches to managing the budget deficit are studied independently based on Uzbekistan's experience and international practice. SA10. Other sources of financing the budget deficit: The advantages and limitations of funds obtained from privatization of state property, grants, public-private partnership (PPP) mechanisms, and other financing tools are analyzed. Additionally, the effective use of these sources and ensuring financial stability are
--	---

	studied separately based on Uzbekistan and international experience. SA11. The role, importance, and necessity of public debt in the context of reforms aimed at implementing priority tasks for 2025–2026 (financial policy, fiscal policy, monetary policy): The analysis covers how government debt is linked to financial policy, budget and tax policy, as well as monetary policy, and also looks at their role in ensuring economic growth, financing investments, and maintaining financial stability. It also takes a close look at the reforms being carried out in Uzbekistan to manage government debt responsibly, maintain debt sustainability, and attract it efficiently, along with international experiences. SA12. Main directions of domestic public debt management activities (financial planning, state financial control, budget execution): The main directions of managing the country's domestic debt are studied, including financial planning, state financial control, and processes related to budget execution. Mechanisms for attracting domestic debt, using it effectively and purposefully, managing the debt portfolio, and fulfilling debt obligations on time are analyzed. The current system of domestic debt management in the Republic of Uzbekistan, ensuring financial stability, and independently studying international best practices are discussed. SA13. Institutional aspects of public debt management: The role of responsible institutions in planning, attracting, accounting for, monitoring, and servicing the national debt, as well as the legal bases regulating their activities, is analyzed. In addition, the national debt management system in the Republic of Uzbekistan and the experiences of advanced international institutions are studied independently.
--	--

	SA14. Modern methods of implementing investment projects under conditions of public indebtedness: The possibilities of using public-private partnerships (PPPs), funds from international financial institutions, sovereign bonds, and other innovative financing tools are analyzed. In addition, issues related to selecting investment projects, financing them, evaluating their outcomes, and ensuring the sustainability of public debt are studied independently, based on the experience of Uzbekistan and international practice. SA15. Specific features of public credit in public debt management: The state credit, its internal and external forms, principles of attracting loan funds and using them effectively, as well as its role in ensuring national debt stability, are analyzed. In addition, the practice of using state credit in the Republic of Uzbekistan and modern approaches to effective debt management based on international experience are studied independently.
Teaching Methods	The module is delivered through economic analysis, systematic and comparative analysis, statistical and economic-mathematical methods, dynamic analysis, graphic and table analysis, as well as analyzing normative-legal documents and studying international experience. These methods help in assessing the state of public debt, identifying budget risks, and developing scientifically based conclusions for effective debt management.
Prerequisites	Budget tax policy BSS 1105 Stable finance BAM 1205 Management finance BOM 1105 Financial risk management MROB 1205
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student performance is assessed through continuous assessment (20%), midterm

	assessment (30%), and a final written examination (50%). The continuous assessment (20%) evaluates active classroom participation, practical lesson exercise performance, seminar discussions, and the successful completion of foundational independent study assignments. It involves analyzing this country's debt policy, the state of domestic and foreign debts, as well as practically studying the mechanism of attracting international loans. The midterm assessment (30%) consists of written theoretical tests, short in-class quizzes, and the evaluation of structured independent study projects. Discussions are held on funding big projects through internal and external debt sources, issuing government securities, placing state assets, and attracting investment projects. The final assessment (50%) consists of a written exam, which includes theoretical questions and tasks related to solving practical financial problems (for example, analyzing data on budget deficits, calculating sources to cover them, and evaluating the internal and external debt situation). This is designed to assess these students' abilities in budget tax policy and its management mechanisms. Successfully completing and submitting all independent study tasks is a mandatory requirement to take the final exam. Grading criteria and assessment scale: Student academic achievement is evaluated based on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student demonstrates a full and deep understanding of government debt policy and its effective implementation, maintains excellent academic and logical clarity, shows independent analytical thinking, is skilled in
--	---

	working with relevant legal documents and regulations, completes all independent tasks accurately, and can successfully perform complex financial calculations. Good (70–89.9 points / Grade 4): The student thoroughly understands the subject content and its practical applications, completes required coursework and independent tasks without significant logical or scientific errors, and provides correct answers to financial problem-solving questions. Average / Satisfactory (60–69.9 points / Grade 3): The student exhibits a general, superficial understanding of personal financial concepts, covers topics in a narrow scope with occasional confusion, and provides vague or incomplete answers to practical financial tasks. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student demonstrates no preparation, lacks fundamental understanding of financial concepts, submits plagiarized or copied work, makes serious mathematical/logical errors in assignments, or fails to answer exam questions.

Field	Description
Module Title	BEHAVIORAL FINANCE
Module Code	XAM2305
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours

	Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	II semester
Module objective	It involves studying the impact of psychological, social, and emotional factors on people's financial decision-making, analyzing the behavior of investors and consumers that can't be fully explained by traditional financial theories, and developing effective financial management skills
Module Learning Outcomes	Knowledge: LO1. Knowledge of the psychological, social, and economic factors that influence people's financial decision-making process. LO2. Understand the role of cognitive errors, stereotypes, and emotional factors in financial decision-making. LO3. Have knowledge about investor behavior, market anomalies, and behavioral characteristics of financial markets. Skills: LO4. Identification and analysis of psychological factors in financial market processes. LO5. Using behavioral approaches in assessing financial risks. LO6. Develop recommendations to improve the efficiency of financial decisions. Competencies: LO7. Taking into account behavioral factors in financial management and investment decision-making. LO8. Solving behavioral finance issues using modern financial technologies and research methods. LO9. Identifying and analyzing irrational behavior in financial markets.
Content	Lectures: L1. Subject, purpose and objectives of behavioral finance: The theoretical

	foundations, purpose, and tasks of behavioral finance are studied. L2. The human factor in financial decision-making: The impact of psychological, social, and emotional factors on investors' and consumers' financial behavior is highlighted. It also provides information about making logical and strict decisions, cognitive limitations, and their effects on financial outcomes. L3. The rational investor model and its limitations: This looks at how investors try to maximize their returns and the practical limits of this model, including the influence of psychological, informational, and behavioral factors. L4. Basic theories of behavioral finance:. Theories that serve as the basis for behavioral finance, their content, and their importance in making financial decisions are studied. The impact of Prospect theory, bounded rationality, ideas, and other behavioral approaches on investor behavior, as well as the role of these theories in modern financial practice, are also discussed. L5. Cognitive errors and their impact on financial decisions: The main cognitive errors that happen during the process of making financial decisions, their causes, and how they affect investor behavior have been studied. The impact of overconfidence, confirmation bias, herding, the availability heuristic, and other cognitive distractions on financial decisions is shown, and modern approaches to reducing these mistakes are also discussed. L6. Emotions and financial decisions: The impact of emotions on the process of making financial decisions is studied. The influence of emotional factors like fear, confidence, bias, regret, and optimism on the financial behavior of investors and consumers is analyzed, and the impact of emotional decisions on financial
--	---

	outcomes, as well as modern approaches to managing them, is also discussed L7. Risk acceptance and decision-making under uncertainty: The theoretical basics of making financial decisions in risky and uncertain conditions are studied. Also, modern approaches to risk management and making smart decisions are highlighted. L8. Investor behavior and stock market processes: The psychological factors of investors, their cognitive errors, and emotions are studied in terms of their impact on securities prices, market fluctuations, and investment decisions. The manifestation of both efficient and irrational behaviors in the stock market and their effect on market efficiency is also highlighted. L9. Behavioral causes of market bubbles and financial crises: The role of behavioral factors in the formation of market bubbles and the emergence of financial crises is studied. The analysis looks at how investors' unpredictable actions, mass psychology, speculative moods, overconfidence, and group behavior affect financial markets. Attention is given to how behavioral factors influence market stability and financial crises. L10. Mental calculation and personal financial management: The theory of mental accounting and its role in personal financial decision-making is studied. It looks at how people categorize their income and expenses and the psychological factors that influence saving, spending, and investment decisions. L11. Consumer Financial Behavior: This looks at patterns of behavior when making decisions about income, spending, saving, and credit, and considers how they affect financial well-being. It also discusses consumers' rational and irrational decisions and the factors that shape them.
--	---

	L12. Behavioral Corporate Finance: The study looks at how cognitive biases, emotions, and behavioral factors typical of managers and leaders affect investment, financing, and dividend policies, and it highlights the importance of a behavioral approach in corporate financial management. L13. Investment decisions and behavioral strategies: The psychological traits of investors, their cognitive styles, emotions, and how these affect their investment strategies are discussed. It also highlights effective behavior-based investment strategies and their practical importance. L14. Modern research methods in behavioral finance: The role of experimental studies, surveys, observation, and statistical and econometric analysis methods in studying financial behavior is examined. Also, approaches to analyzing research results and drawing scientific conclusions are outlined. L15. The development of behavioral finance in the digital economy: In the context of the digital economy, the development trends of behavioral finance and the impact of digital technologies on the financial decision-making process are studied. The influence of artificial intelligence, fintech, mobile financial services, digital payment systems, and online investment platforms on user behavior is analyzed. Additionally, the opportunities and risks that arise in the digital finance environment are also highlighted. Practical lessons: P1. Subject, purpose and objectives of behavioral finance: The main concepts of behavioral finance, investors' decision-making actions, and psychological factors are studied through practical examples and case studies.
--	--

	P2. The human factor in financial decision-making: They analyze the problems related to evaluating financial decisions made under the influence of a person's psychological factors, identify their financial consequences, and work on developing alternative solutions. P3. The rational investor model and its limitations: They evaluate the factors that influence investors' decisions, figure out the situations where they deviate from a logical model, and analyze how this affects financial outcomes. P4. Basic theories of behavioral finance: The main theories of behavioral finance are analyzed through practical examples and case studies. Students look at how these theories are applied in making financial decisions, the importance of explaining investor behavior, and also evaluate real-life outcomes. P5. Cognitive errors and their impact on financial decisions: Various cognitive disorders are analyzed based on real situations and work scenarios. Students focus on studying issues related to identifying the mistakes investors make, assessing their impact on financial outcomes, and making objective and well-founded decisions. P6. Emotions and financial decisions: The impact of emotions on financial decisions is analyzed based on real situations and examples. Evaluating decisions influenced by emotional factors, understanding their consequences, and making smart and balanced financial choices helps in shaping your outlook. P7. Risk acceptance and decision-making under uncertainty: Financial decisions made under risk and uncertainty are analyzed through practical examples and case studies. It looks at assessing the level of risk, comparing different decisions, and learning how to find the best financial solutions in uncertain situations.
--	---

	P8. Investor behavior and stock market processes: They identify factors that influence investors' decisions, evaluate market changes, and analyze how behavioral factors affect investment outcomes. P9. Behavioral causes of market bubbles and financial crises: Historical financial crises and market bubbles are analyzed through practical examples and case studies. Investors assess how behavior affects market prices, identify the behavioral causes of financial crises, and draw conclusions on how to prevent them. P10. Mental calculation and personal financial management: They help develop skills in creating budgets, planning income and expenses, and evaluating savings and investment decisions. P11. Consumer Financial Behavior: They evaluate decisions about buying, saving, and using credit, identify behavioral factors, and analyze their impact on financial outcomes. P12: Behavioral Corporate Finance: They analyze data to identify the psychological factors that influence leaders' financial decisions and assess how these affect the company's operations and financial results. P13. Investment decisions and behavioral strategies: They talk about identifying the behavioral factors that influence investment decisions and evaluating different investment strategies. P14. Modern research methods in behavioral finance: Methods for studying behavioral finance are applied based on practical examples. Students engage in creating surveys, collecting data, performing statistical analysis, interpreting research results, and evaluating behavioral factors. P15. The development of behavioral finance in the digital economy: They do research on
--	--

	evaluating financial decisions made on digital platforms, identifying behavioral factors, and analyzing the advantages and risks of modern financial technologies. Self-Assignments: SA1. Subject, purpose and objectives of behavioral finance: The topic of behavioral finance, its purpose and tasks, its differences from classical financial theory, as well as the importance of the human factor in financial decisions, is studied independently. SA2.The human factor in financial decision-making: The role of human factors in making financial decisions, the impact of psychological and social factors on financial behavior, and the characteristics of rational and irrational decisions are studied. SA3.The rational investor model and its limitations: The content, advantages, and limitations of the rational investor model, as well as the impact of behavioral factors on investment decisions, are studied independently. Based on scientific sources, they analyze the model's role in modern financial theory and its practical significance. SA4. Basic theories of behavioral finance: The main theories of behavioral finance, their content, and their role in the development of the finance field are studied independently. Students analyze how these theories are practically important in investment decisions and financial markets, relying on scientific sources. SA5) Cognitive errors and their impact on financial decisions: Types of cognitive biases, their impact on financial decision-making, and ways to reduce them are studied independently. SA6. Emotions and financial decisions: The role of emotions in making financial decisions and their impact on investment activities and
--	---

	financial behavior is studied separately. Based on scientific sources, they analyze how emotional factors affect the effectiveness of financial decisions. SA7. Risk acceptance and decision-making under uncertainty: The impact of risk and uncertainty on financial decisions, investors' attitude towards risk, and modern risk management methods are studied independently. SA8. Investor behavior and stock market processes: The impact of investors' behavior on the development of the stock market, as well as how the psychological traits and behavioral factors of market participants affect investment decisions, is studied. They analyze behavioral processes in the stock market based on scientific sources. SA9. Behavioral causes of market bubbles and financial crises: The role of behavioral factors in the emergence of market bubbles and financial crises is studied independently. Based on historical experiences and scientific sources, they analyze how investors' behavior affects financial markets and the reasons behind crises. SA10. Mental calculation and personal financial management: The theory of mental accounting and its impact on personal financial management and financial decisions is studied independently. SA11. Consumer Financial Behavior: They get information about the main features of consumers' financial behavior, the factors that influence it, and its role in making financial decisions. SA12. Behavioral Corporate Finance: The content of corporate finance, the role of psychological factors in corporate governance, and their impact on a company's financial decisions are studied separately.
--	---

	SA13. Investment decisions and behavioral strategies: The role of behavioral strategies in making investment decisions, their impact on investment efficiency, and modern investment approaches are studied independently. SA14 Modern research methods in behavioral finance: Modern research methods used in behavioral finance, their advantages and limitations are studied independently. SA15. The development of behavioral finance in the digital economy: In the context of the digital economy, the development directions of behavioral finance as well as the impact of fintech and digital financial services on human behavior are studied independently.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, independent analytical assignments, problem-solving tasks, case studies, and the use of modern FinTech applications.
Prerequisites	Budget tax policy BSS 1105 Stable finance BAM 1205 Management finance BOM 1105 Financial risk management MROB 1205
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student performance is assessed through continuous assessment (20%), midterm assessment (30%), and a final written examination (50%). The continuous assessment (20%) evaluates active classroom participation, practical lesson exercise performance, seminar discussions, and the successful completion of foundational independent study assignments. This includes making financial decisions, tracking personal income and expenses in real time, calculating emergency fund reserves, analyzing credit card statements and interest payments, and actually spotting cybersecurity/phishing threats.

	The midterm assessment (30%) consists of written theoretical tests, short in-class quizzes, and the evaluation of structured independent study projects. Main projects include justifying investment decisions, cognitive errors, emotions in financial decision-making, being ready for risks, creating independent projects, and putting them into practice. The final assessment (50%) is a comprehensive final written examination consisting of theoretical questions and practical financial problem-solving tasks (e.g., calculating mortgage amortization schedules, compound interest growth, insurance premium deductions, and pension fund yields). It is designed to evaluate students' mastery of personal finance principles, quantitative decision-making skills, and ability to navigate digital financial ecosystems. Successful completion and submission of all assigned independent study tasks is a mandatory prerequisite for taking the final exam. Grading criteria and assessment scale: Student academic achievement is evaluated based on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student shows a full and deep understanding of the principles of financial behavior, maintains excellent scientific and logical rigor, demonstrates independent analytical thinking, is well-versed in relevant financial laws and regulations, completes all independent tasks accurately, and successfully carries out complex financial calculations. Good (70–89.9 points / Grade 4): The student understands the content of the topic and its practical application deeply, completes the necessary coursework and independent tasks without major logical or scientific errors, and
--	---

	also gives correct answers to questions about behavior and ethical issues. Average / Satisfactory (60–69.9 points / Grade 3): The student exhibits a general, superficial understanding of personal financial concepts, covers topics in a narrow scope with occasional confusion, and provides vague or incomplete answers to practical financial tasks. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student demonstrates no preparation, lacks fundamental understanding of financial concepts, submits plagiarized or copied work, makes serious mathematical/logical errors in assignments, or fails to answer exam questions.

Field	Description
Module Title	INTERNATIONAL FINANCIAL RELATIONS
Module Code	XMMU2305
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	II semester
Module objective	It involves developing deep knowledge and practical skills on the formation and development patterns of the international financial system, the theoretical and practical foundations of international financial relations, the functioning of global financial markets, international capital flows, currency and credit

	operations, as well as the activities of international financial institutions.
Module Learning Outcomes	Knowledge: LO1. Understanding the structure and functioning mechanisms of the global financial system, the international monetary system, and global financial markets. LO2. Knowledge of the essence of international capital flows, foreign investments, international credit relations and financial transactions. LO3. Analysis of the activities of international financial institutions and their role in the world economy. Skills: LO4. Financial assessment of international investment projects. LO5. Use of methods for identifying and managing currency and financial risks. LO6. International financial decision-making in modern economic conditions. Competencies: LO7. Have the competence to independently analyze changes in the global financial environment. LO8. Identifying problems in the field of international financial relations and developing scientific and practical solutions. LO9. Be able to analyze the processes of integration of the national economy into the global financial system.
Content	Lectures: L1. The essence, stages of development and modern trends of international financial relations: Helping students develop theoretical knowledge about the economic essence, subject, and objects of international financial relations, as well as the factors that shape them and their historical development stages. It also covers the evolution of the international financial system, current trends in the context of globalization, digital finance, international capital

	flows, and the role of international financial institutions. L2. The global financial system: structure, participants and development trends: Global moliya tizimining tuzilishi, uning asosiy tarkibiy qismlari va ishtirokchilari haqida nazariy bilimlarni rivojlantirish. Xalqaro moliya institutlari, moliya bozorlar, transmilliy korporatsiyalar, markaziy banklar va mamlakatlarning global moliya tizimidagi roli, shuningdek tizimning joriy rivojlanish tendensiyalari muhokama qilinadi. L3. Global financial markets and their role in international economic relations: The international situation of currency, capital, credit, and securities markets, their interconnections, and their impact on the global economy are covered. L4. The evolution of the international monetary system and its contemporary problems: Develop theoretical knowledge about the formation of the international financial system, its stages of development, and main principles. The topic covers the gold standard system, the Bretton Woods and Jamaica currency systems, modern currency relations, as well as current issues facing the international financial system. L5. Exchange rate formation and its impact on international financial stability: To develop theoretical knowledge about the economic nature of exchange rates, the factors that shape them, and the different exchange rate regimes. This topic also covers the internal and external factors affecting the exchange rate, as well as how changes in the exchange rate impact international trade, investments, and financial stability. L6. International capital flows: forms, factors and impact on the economies of developing countries: Helping to understand the economic
--	---

	nature of international capital flows, their main forms, and the factors that influence their movement. The topic covers direct and portfolio investments, international loans, capital movement, and their impact on the economy and financial stability of developing countries. L7. International experience in attracting foreign direct investment: Provide information about the economic nature and importance of foreign direct investment (FDI) and international experiences in attracting them. The topic covers improving the investment environment, investment policy, international experiences, and the impact of FDI on economic growth and competitiveness. L8. The activities of international financial institutions and their role in global economic development: The role of the International Monetary Fund, the World Bank Group, the Asian Development Bank, and other international financial institutions in ensuring global economic development, financial stability, and sustainable development is highlighted. L9. International debt relations and mechanisms for managing public external debt: This is about international credits, sovereign debt, external debt sustainability, debt management principles, and their impact on macroeconomic stability and economic development. L10. International financial crises: causes, consequences and prevention mechanisms: The main factors of global financial crises, their impact on the world and national economy, as well as the mechanisms to ensure financial stability and prevent crises are discussed. L11. Financial activities of transnational corporations and international capital movements: The financial activities of transnational corporations (TNCs), their role in international capital movement and their impact
--	--

	on the global economy, as well as their investment strategies, sources of financing, capital flows, and role in international financial relations are discussed. L12. International Settlement System and Modern Payment Mechanisms: The content of international settlements, their main forms, the procedure for implementing them, and their importance in international trade and financial relations are highlighted. L13. Development of international financial relations in the context of digital transformation: Providing information about using modern financial services and conducting international financial relations based on digital technologies. L14. Green finance and stable development financing international mechanisms: The content highlights the principles of green finance and its role in funding sustainable development goals. It also covers international green financing mechanisms, green bonds, ESG principles, climate funds, and the role of international financial institutions in ensuring environmental and social sustainability. L15. Uzbekistan's integration into the international financial system: challenges and prospects: The integration of Uzbekistan into the international financial system, its participation in international financial institutions and global financial markets, attracting foreign investments, liberalizing currency policy, and implementing international financial standards are discussed. Practical lessons: P1. The essence, stages of development and modern trends of international financial relations: Evaluating international financial indicators, determining the impact of changes in global financial markets on the national
--	---

	economy, and developing students' analytical and independent thinking skills. P2. The global financial system: structure, participants and development trends: assessing the impact of international financial institutions on the economy and discussing the latest changes in the global financial system. P3. Global financial markets and their role in international economic relations: Analyzing the activities of global financial markets based on practical examples and statistical data, assessing the impact of international capital flows and financial instruments on the economy, and forecasting current trends in the world financial markets. P4. The evolution of the international monetary system and its contemporary problems: Analyzing the development of the international currency system based on historical and modern examples, studying currency exchange rate dynamics, international currency crises, and assessing their impact on the global economy. P5. Exchange rate formation and its impact on international financial stability: Develop skills to analyze currency rate trends using practical examples and statistical data, assess the impact of rate changes on international financial operations and macroeconomic stability, and make relevant conclusions. P6. International capital flows: forms, factors and impact on the economies of developing countries: Assessing the impact of investment flows on economic growth, employment, external debt, and the balance of payments, and drawing analytical conclusions. P7. International experience in attracting foreign direct investment: Analyzing the experience of attracting foreign direct investment in different countries through practical examples, assessing investment
--	---

	attractiveness, and preparing analytical conclusions on shaping an effective investment policy P8. The activities of international financial institutions and their role in global economic development: Analyzing international financial institutions, investment projects, and their activities in supporting economic reforms with practical examples. P9. International debt relations and mechanisms for managing public external debt: Analyzing government external debt indicators based on practical examples and statistical data, assessing the debt burden, and determining the effectiveness of debt management. P10. International financial crises: causes, consequences and prevention mechanisms: Analyzing international financial crises through historical and modern examples, assessing their impact on economic indicators, and determining the effectiveness of policies and measures used to overcome the crisis. P11. Financial activities of transnational corporations and international capital movements: Assessing the financial activities of transnational corporations and analyzing their impact on international capital flows, investment flows, and the economies of host countries, and drawing analytical conclusions. P12. International Settlement System and Modern Payment Mechanisms: He analyzes international accounting forms based on practical examples, evaluates their strengths and weaknesses, and draws conclusions on applying various accounting methods. P13. Development of international financial relations in the context of digital transformation: According to statistical data, analyzing sources about those currently
--	---

	conducting international financial relations based on digital technologies P14. Green finance and stable development financing international mechanisms: He analyzes green financing tools and international experience, evaluates the economic and environmental efficiency of green investment projects, and develops practical proposals on financing sustainable development in Uzbekistan. P15. Uzbekistan's integration into the international financial system: challenges and prospects: This analyzes statistical indicators that describe Uzbekistan's role and participation in the international financial system, evaluates the outcomes of cooperation with international financial institutions, and develops practical suggestions aimed at promoting the country's international financial integration. Self-Assignments: SA1. The essence, stages of development and modern trends of international financial relations: Independently studying and analyzing scientific and practical sources on the stages of development of international financial relations, the impact of globalization and digitization on the financial system, the activities of international financial institutions, and trends in modern financial markets, and preparing conclusions. SA2. The global financial system: structure, participants and development trends: Analyzing the stages of development of the global financial system, the activities of international financial institutions, reforms in global financial markets, and current development trends. SA3. Global financial markets and their role in international economic relations:
--	--

	Independently studying scientific and practical sources on the development trends of global financial markets, international financial operations, capital movement, and modern financial instruments. SA4. The evolution of the international monetary system and its contemporary problems: Analyzing sources on the stages of development of the international currency system, modern currency policy, global currency issues, and the role of international financial institutions in these processes, and preparing conclusions. SA5. Exchange rate formation and its impact on international financial stability: Independently studying, analyzing, and drawing conclusions about how exchange rates are formed, currency policy, current trends in currency markets, and their impact on international financial stability. SA6. International capital flows: forms, factors and impact on the economies of developing countries: Modern trends in international capital flows, factors attracting investments to developing countries, independently studying the advantages and risks of capital movement based on scientific and practical sources. SA7. International experience in attracting foreign direct investment: Independently study advanced international experiences in attracting foreign direct investment, the factors affecting the investment environment, and Uzbekistan's investment policy. SA8. The activities of international financial institutions and their role in global economic development: Analyzing the modern activities of international financial institutions, their financial programs, their role in solving global economic problems, and areas of cooperation with Uzbekistan, and preparing conclusions.
--	--

	SA9. International debt relations and mechanisms for managing public external debt: Independently studying international debt relations, the current mechanisms for managing the country's external debt, the debt policies of international financial institutions, and Uzbekistan's external debt strategy based on sources. SA10. International financial crises: causes, consequences and prevention mechanisms: The causes and consequences of global financial crises, international experiences in dealing with them, mechanisms for ensuring financial stability, analyzing modern risks, and drawing conclusions. SA11. Financial activities of transnational corporations and international capital movements: Independently study the modern financial strategies of transnational corporations, their participation in international capital movements, their impact on global investment processes, and their role in economic development, based on scientific and practical sources SA12. International Settlement System and Modern Payment Mechanisms: It studies the main forms of international settlements, their application characteristics, and their importance in international trade. It compares different settlement methods and analyzes practical situations. SA13. Development of international financial relations in the context of digital transformation: Independently studying, analyzing, and drawing conclusions from the sources currently conducting international financial relations based on digital technologies. SA14. Green finance and stable development financing international mechanisms: Students study international standards, scientific literature, and reports from international
--	---

	organizations related to green finance and financing sustainable development. They prepare reports, essays, or presentations on the topic and develop analytical conclusions about international experience and the prospects for developing green finance in Uzbekistan. SA15. Uzbekistan's integration into the international financial system: challenges and prospects: Studies regulatory and legal documents related to Uzbekistan's integration into the international financial system, as well as reports from international organizations and scientific sources. Prepares an analytical presentation, essay, or report on the topic and draws conclusions about existing problems in the integration process and prospects for future development.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, independent analysis tasks, problem-solving assignments, case studies, and the use of modern digital technologies.
Prerequisites	Budget tax policy BSS 1105 Stable finance BAM 1205 Management finance BOM 1105 Financial risk management MROB 1205
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student performance is assessed through continuous assessment (20%), midterm assessment (30%), and a final written examination (50%). The continuous assessment (20%) evaluates active classroom participation, practical lesson exercise performance, seminar discussions, and the successful completion of foundational independent study assignments. This basically involves identifying trends in the development of international financial relations, participants in the global financial system, the activities of

	transnational companies, and attracting foreign direct investments. The midterm assessment (30%) consists of written theoretical tests, short Q&A quizzes in class, and evaluations of independent study projects. Writing an essay about international capital flows, the development of the international currency system and modern issues, the activities of international financial institutions, financial crises, and green finance sustainable development strategies. The final assessment (50%) consists of a written exam with theoretical questions and practical problem-solving tasks (for example, international financial crises, their causes, the international payment system, and modern payment mechanisms). This is designed to assess students' understanding of the principles of international financial relations, their decision-making skills in a global economic context, and their ability to work in digital financial ecosystems. Completing and submitting all independent study tasks successfully is a mandatory requirement to be eligible to take the final exam. Grading criteria and assessment scale: Student academic achievement is evaluated based on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student shows a complete and deep understanding of the principles and methods of international financial relations, maintains scientific and logical rigor perfectly, demonstrates independent analytical thinking, masters the relevant laws and regulations related to international financial relations, completes all independent tasks accurately, and successfully solves complex financial calculations.
--	---

	Good (70–89.9 points / Grade 4): The student understands the topic and its practical applications deeply, completes the required coursework and independent assignments without major logical or scientific errors, and answers questions correctly on solving problems related to international financial relations. Average / Satisfactory (60–69.9 points / Grade 3): The student has a general, superficial understanding of the content and essence of international financial relations, covers topics narrowly, and sometimes gives incorrect answers, while also providing vague or incomplete answers to practical financial tasks. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student demonstrates no preparation, lacks fundamental understanding of financial concepts, submits plagiarized or copied work, makes serious mathematical/logical errors in assignments, or fails to answer exam questions.

Field	Description
Module Title	ANALYSIS OF THE INTERNATIONAL FINANCIAL MARKET
Module Code	XMBT2305
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours

	Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	II semester
Module objective	It involves forming knowledge, skills, and competencies related to topics like the economic essence of the international financial market, its emergence, stages of development and models, features of the money market and its role in shaping the international financial market, peculiarities and operating mechanism of the stock market, peculiarities and trading mechanism of the bond market, conditions for the functioning of the government securities market, the connection of the derivative securities market with other sectors of the financial market, and other similar financial concepts.
Module Learning Outcomes	Knowledge: LO1. The student will gain an understanding of the economic essence of the international financial market, its emergence, stages of development, and models. LO2. The student will gain an understanding of the characteristics of the money market and its role in the formation of the international financial market. LO3. learns the features of the bond market and its trading mechanism Skills: LO4. Knowledge is acquired of the formation and development of international financial relations. LO5. Knowledge is acquired of the international financial market, transnational corporations, portfolio investors, exports and imports, stock exchanges, eurocredits, exchange rates, and economic integration. LO6. Awareness is developed of the intensification of global problems in the world economy .

	Competencies: LO7. The functioning procedures of the mortgage securities market are studied. LO8. The mechanisms of the cryptocurrency market and the characteristics of precious metals and gemstones markets are studied. LO9. The specific features and functioning mechanisms of the stock market are studied.
Content	Lectures: L1. The subject, object, methods of the course “Analysis of the International Financial Market” and its interrelation with other disciplines: The structure, participants, and operating principles of international financial markets are explained, and the connections between this topic and international finance, investments, macroeconomics, banking, and financial analysis are also shown. Within the topic, analyzing international financial markets using modern approaches is also covered. L2. The importance of analyzing the international financial market in the global financial system: The movement of international capital, financial instruments, market conditions, and the impact of global financial processes on economic development are discussed. The role of analyzing the international financial market in investment decisions and ensuring financial stability is especially highlighted. L3. Financial globalization and international financial integration: The free movement of international capital, the integration of financial markets, the activities of transnational banks and corporations, the role of international financial institutions, and the impact of digital financial technologies on globalization are highlighted. The effects of financial globalization on investments, economic growth, financial stability, and financial security are explained.

	L4. The international financial market and its evolution: The text talks about the formation of international currencies, capital, credit, and securities markets and their role in the global financial system, as well as the economic, political, and technological factors affecting the development of international financial markets, financial globalization processes, and the role of digital financial technologies. It also discusses the modern development trends of the international financial market and its impact on the world economy and investment processes. L5. The international currency and electronic money market: The formation of exchange rates, international currency operations, spot and forward contracts, as well as methods of managing currency risk are covered. The influence of electronic money and digital payment systems, central banks' digital currencies (CBDCs), electronic payment instruments, and fintech technologies on international financial markets is also discussed. L6. The international loan capital market: This covers the international credit market, the international bond market, syndicated loans, eurocredits, and other debt capital instruments, as well as how they are formed and work. It also shows how the international debt capital market finances investments, facilitates capital movement, impacts economic development, and highlights current development trends. L7. The international investment market: The economic essence, structure, and role of the international investment market in the global financial system are studied. Direct foreign investments (FDI), portfolio investments, and other forms of international investments are explained, along with the factors affecting their movement and the importance of investment flows for economic development. Additionally,
--	--

	modern development trends of the international investment market, the investment environment, and methods for assessing investment risks are also covered. L8. The international stock market: It talks about participants in the stock market, types of stocks, how stock exchanges work, factors affecting stock prices, and trading mechanisms in international capital markets, as well as the importance of the international stock market in attracting investments, corporate financing, and capital allocation, along with modern development trends. L9. The international debt securities market (Eurobonds): The economic nature, structure, and role of the international bond market in the global financial system were studied. The issuance and circulation of government and corporate bonds, international debt instruments, and Eurobonds, as well as their importance in financing investments, are discussed. Additionally, the development trends of the Eurobond market, the issuance process, profitability, and associated risks are also reviewed. L10. The international market for asset securitization instruments: The formation, issuance, and trading of mortgage-backed securities (MBS), asset-backed securities (ABS), and other securitization instruments are discussed, as well as their role in increasing liquidity, distributing risks, and financing investments, along with current trends in this market. L11. The international derivatives market: It covers forwards, options, and swap contracts, how they work, their importance in managing currency, interest rate, and price risks, as well as the latest trends in the derivatives market, their advantages, and the risks associated with them.
--	--

	Practical lessons: P1. The subject, object, methods of the course “Analysis of the International Financial Market” and its interrelation with other disciplines: Participants in international financial markets develop practical skills in analyzing financial instruments and market indicators, as well as in assessing their interconnections with different sectors. P2. The importance of analyzing the international financial market in the global financial system: The main indicators of international financial markets, their development trends, and their impact on the global financial system are analyzed based on practical data. They assess the state of the international financial market, identify market trends, and analyze how they affect investment and financial decisions. P3. Financial globalization and international financial integration: They study international capital flows, foreign investments, international portfolio investments, and financial integration indicators. The financial integration experiences of different countries are analyzed comparatively, and scientific-practical conclusions are drawn about the impact of globalization on national economies and financial markets. P4. The international financial market and its evolution: They evaluate international financial market indicators, identify capital flows and market trends, analyze the impact of international financial crises on market development, and compare the development features of financial markets in different countries. P5. The international currency and electronic money market: The main indicators of the international currency and electronic
--	--

	money market, the dynamics of exchange rates, and the operation of electronic payment systems are analyzed based on practical data and case studies. Information is analyzed to assess exchange rate changes, identify currency risks, look at the advantages and limitations of electronic payment tools, and understand how to use modern digital financial services. P6. The international loan capital market: They evaluate the characteristics of international loans, bonds, and other debt instruments, compare sources of financing, and analyze trends in the international credit market. P7. The international investment market: The main indicators of the international investment market, investment flows, and their dynamics are analyzed based on practical data and case studies. They compare direct and portfolio investments, assess investment attractiveness, and analyze investment risks. P8. The international stock market: The international stock market, stock indices, and the main international stock exchanges are studied based on practical data and case analyses. They learn to evaluate factors that affect stock price changes, identify trends in the stock market, and make investment decisions. P9. The international debt securities market (Eurobonds): Practical examples and market data on the international debt securities market and eurobonds are analyzed. They assess the profitability of bonds, analyze the issuance of eurobonds and their attractiveness for investment, and identify risks associated with debt securities. P10. The international market for asset securitization instruments: Methods for securing property and their use in international markets are analyzed based on practical examples and work scenarios. They assess the
--	--

	structure, effectiveness, and risks of these security tools, as well as analyze their attractiveness from an investment perspective. . P11. The international derivatives market: The returns of financial instruments in the international market are analyzed based on practical examples and case studies. They evaluate the structure of derivative instruments, pricing principles, their importance in risk protection, and their role in making investment decisions. Self-Assignments: SA1. The subject, object, methods of the course “Analysis of the International Financial Market” and its interrelation with other disciplines: The subject, object, methods, and connection of studying the international financial market with other economic sciences are studied independently. SA2. The importance of analyzing the international financial market in the global financial system: The importance of analyzing the international financial market in the world financial system, its impact on global financial processes, and current development trends are studied independently. SA3. Financial globalization and international financial integration: The stages of development, main factors, and current trends of financial globalization and international financial integration are studied independently. They analyze the impact of globalization on international financial markets, capital flows, and national economies. SA4. The international financial market and its evolution: They analyze the role of the international financial market in the global economy, the factors affecting its development, and future growth trends. They also draw their
--	---

	own conclusions about the impact of the international financial market on Uzbekistan's financial system. SA5. The international currency and electronic money market: The trends in the international currency market and the electronic money market, their role in the international financial system, and the impact of modern digital financial technologies on currency relations are studied independently. SA6. The international loan capital market: They analyze the stages of development of the international debt capital market, its main financial instruments and its significance in the world economy, as well as the current development trends, problems, and prospects of the international debt capital market. SA7. The international investment market: They analyze the development trends of the international investment market, the characteristics of international capital flows and their impact on economic development, the current state of the international investment market, its problems, and the promising directions for its development. SA8. The international stock market: The characteristics of the development of the international stock market, the activities of stock exchanges, and the importance of the stock market in the global economy are studied independently. They analyze the current development trends of the stock market, investment opportunities, and risks. SA9. The international debt securities market (Eurobonds): They analyze the characteristics of the development of the international debt securities market and eurobonds, their role in the international capital market and the importance of financing investments, as well as the current
--	--

	development trends, advantages, and risks of the eurobond market. SA10. The international market for asset securitization instruments: They analyze the international market for asset securitization instruments, its development trends, and its importance in the global financial system, as well as the benefits, risks, and usage features of securitization instruments in the modern financial market. SA11. The international derivatives market: They study the development characteristics of the capital market, its main instruments, and its importance in the international financial system, as well as how to manage risks from derivative instruments, improve investment efficiency, and the current trends in their use in financial markets.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, independent analytical assignments, problem-solving tasks, case studies, and the use of modern FinTech applications.
Prerequisites	Budget tax policy BSS 1105 Stable finance BAM 1205 Management finance BOM 1105 Financial risk management MROB 1205
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student performance is assessed through continuous assessment (20%), midterm assessment (30%), and a final written examination (50%). The continuous assessment (20%) evaluates active classroom participation, practical lesson exercise performance, seminar discussions, and the successful completion of foundational independent study assignments. This includes studying the international finance market: the types of securities in the stock market, the state

	of loans, attracting international investments, and using apps for electronic money. The midterm assessment (30%) consists of written theoretical tests, short in-class quizzes, and the evaluation of structured independent study projects. The main projects involve writing an analytical essay about the role of the international financial market in the global financial system, financial globalization and international integration, international currencies and electronic money, as well as eurobonds. The final assessment (50%) consists of a written exam with theoretical questions and practical financial problems (for example, calculations related to the international financial market and its development, stock market activities, loans, and investment operations). This test is designed to see how well students understand the international finance market, how they make decisions using numbers, and how they manage international finance market instruments. To take the final exam, you need to complete and submit all independent study assignments. Grading criteria and assessment scale: Student academic achievement is evaluated based on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student has a complete and deep understanding of the principles of the international financial market, excellent preservation of scientific and logical perseverance, demonstrates independent analytical thinking, is perfectly versed in the relevant financial laws and regulations, accurately performs all independent tasks and successfully solves complex financial calculations.
--	--

	Good (70–89.9 points / Grade 4): The student thoroughly understands the subject content and its practical applications, completes required coursework and independent tasks without significant logical or scientific errors, and provides correct answers to financial problem-solving questions. Average / Satisfactory (60–69.9 points / Grade 3): The student understands the concepts of the international financial market in a general, superficial way, covers topics narrowly, sometimes gets confused, and gives unclear or incomplete answers to practical financial tasks.. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student demonstrates no preparation, lacks fundamental understanding of financial concepts, submits plagiarized or copied work, makes serious mathematical/logical errors in assignments, or fails to answer exam questions.

Field	Description
Module Title	MANAGEMENT OF INVESTMENT PROJECTS
Module Code	ILB2305

Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	III semester
Module objective	The objective of the Management of Investment Projects module is to teach students the theoretical foundations, principles and methods of investment project management, and to develop the knowledge, skills and competencies necessary for planning, evaluating, financing and implementing investment projects, thereby preparing them to become qualified specialists through creative and analytical thinking.
Module Learning Outcomes	Knowledge: LO1. Explain the theoretical foundations, principles and methods of investment project management, including project identification, planning, appraisal, financing, implementation, monitoring and evaluation. LO2. Apply knowledge, skills and competencies related to investment analysis, project financing, risk assessment, project management techniques and the decision-making processes necessary for effective investment project implementation. Skills: LO3. Understand the stages of the investment project life cycle and the principles of project management. LO4. Prepare, analyze and evaluate investment projects using appropriate financial and economic techniques. LO5. Assess project feasibility, investment efficiency and project risks. LO6. Select suitable financing sources and manage project resources effectively.

	LO7. Develop the project concept and formulate the idea of the investment feasibility of the project. Competencies: LO8. Develop and manage investment projects in accordance with organizational and economic objectives. LO9. Conduct financial and economic analyses of investment projects and prepare analytical reports. LO10. Demonstrate professional competence in investment decision-making, project monitoring and performance evaluation in national and international business environments.
Content	Lectures: L1. The concept, purpose and structure of an investment project; the concept of project management: Examination of the concept, purpose and structure of an investment project and the concept of project management. L2. Development of an investment strategy for the project: Study of the development of an investment strategy for the project. L3. Organization of the preparation and implementation of an investment project: Analysis of the organization of the preparation and implementation of an investment project. L4. The project's business plan and its structure: Study of the project's business plan and its structure. L5. Marketing of an investment project: Examination of the marketing of an investment project. L6. Developing the capital budget for the project and generating funding sources: Study of developing the capital budget for the project and generating funding sources. L7. The project production plan: Analysis of the project production plan.

	L8. The role of the investment climate in the development of investment activities: Study of the role of the investment climate in the development of investment activities. L9. Project risk management: Examination of project risk management. L10. Project quality management: Study of project quality management. L11. Project team management: Analysis of project team management. L12. Completion of investment projects: Study of the completion of investment projects. Practical lessons: P1. The concept, purpose and structure of an investment project; the concept of project management: Practical study of the concept, purpose and structure of an investment project. P2. Development of an investment strategy for the project: Practical study of the development of an investment strategy for the project. P3. Organization of the preparation and implementation of an investment project: Practical analysis of the preparation and implementation of an investment project. P4. The project's business plan and its structure: Practical development of a project business plan and its structure. P5. Marketing of an investment project: Practical study of the marketing of an investment project. P6. Developing the capital budget for the project and generating funding sources: Practical development of the capital budget and funding sources for the project. P7. The project production plan: Practical study of the project production plan. P8. The role of the investment climate in the development of investment activities:
--	--

	Practical analysis of the role of the investment climate in investment activities. P9. Project risk management: Practical exercises on project risk management. P10. Project quality management: Practical study of project quality management. P11. Project team management: Practical analysis of project team management. P12. Completion of investment projects: Practical study of the completion of investment projects. Self-Assignments: SA1. The concept, purpose and structure of an investment project: Independent study of the concept, purpose and structure of an investment project. SA2. Classification of projects: large and small, internal and external, technical and non-technical: Study of the classification of projects – large and small, internal and external, technical and non-technical. SA3. Project participants and their analysis: Analysis of project participants. SA4. Priorities of “Project Management”: Study of the priorities of project management. SA5. The relationship between project management, investment management and functional management: Examination of the relationship between project management, investment management and functional management. SA6. The concept of investment strategy and its importance: Study of the concept of investment strategy and its importance. SA7. Principles and stages of developing an investment strategy for a project: Study of the principles and stages of developing an investment strategy for a project. SA8. Formation of investment strategy and development of project strategy: Analysis of
--	---

	the formation of investment strategy and the development of project strategy. SA9. Determining the investment objectives and strategic directions for the project: Study of the investment objectives and strategic directions for the project. SA10. Strategic resource utilization of investment projects: Examination of the strategic use of the resources of investment projects. SA11. The content of the investment cycle and the stages of project development: Study of the content of the investment cycle and the stages of project development. SA12. Project cycle stages: Study of the stages of the project cycle. SA13. Development of a project concept: Examination of the development of a project concept. SA14. Formation of an investment idea for the project: Study of the formation of an investment idea for the project. SA15. Development of investment project options: Analysis of the development of investment project options. SA16. Project life cycle: pre-investment and investment-operation phase: Study of the project life cycle – the pre-investment and investment-operation phases. SA17. Preliminary project plan and pre-investment studies: Examination of the preliminary project plan and pre-investment studies. SA18. Procedures for assessing project viability: Study of the procedures for assessing project viability. SA19. Project environment and stages of its organization: Analysis of the project environment and the stages of its organization.
--	---

	SA20. Preparation for project production activities: Study of the preparation for project production activities. SA21. Project exploration stages and construction phase: Examination of the project exploration stages and the construction phase. SA22. Monitoring of economic indicators of an investment project: Study of the monitoring of the economic indicators of an investment project. SA23. The essence and tasks of business planning: Study of the essence and tasks of business planning. SA24. The function and structure of a business plan: Examination of the function and structure of a business plan. SA25. General information and summary of the business plan: Study of the general information and summary of a business plan. SA26. Features of a business plan in investment planning: Analysis of the features of a business plan in investment planning. SA27. The essence of the modern concept of market research: Study of the essence of the modern concept of market research. SA28. Marketing research and benchmarking: Examination of marketing research and benchmarking. SA29. Project marketing program and budget: Study of the project marketing program and budget. SA30. Marketing management during project implementation: Analysis of marketing management during project implementation. SA31. Theoretical foundations of capital structure: Study of the theoretical foundations of capital structure. SA32. Capital cost assessment: Examination of the assessment of capital cost. SA33. Developing and implementing the capital budget for the project and decision-
--	--

	making: Study of developing and implementing the capital budget for the project and decision-making. SA34. Project investment opportunities and options for using capital alternatives: Analysis of project investment opportunities and options for using capital alternatives. SA35. Basic principles of project cost management: Study of the basic principles of project cost management. SA36. Project cost management and budgeting: Examination of project cost management and budgeting. SA37. Project cost control methods: Study of the methods of project cost control. SA38. The main stages of project implementation: Study of the main stages of project implementation. SA39. Estimated construction cost and total cost structure of the investment project: Analysis of the estimated construction cost and the total cost structure of an investment project. SA40. Organization of industrial production and selection of technologies: Study of the organization of industrial production and the selection of technologies. SA41. Project control and regulation: Examination of project control and regulation. SA42. Managing changes in the project: Study of managing changes in the project. SA43. Measures to reduce project risks: Analysis of the measures to reduce project risks. SA44. Project quality management program: Study of the project quality management program. SA45. Acceptance of a completed construction project into operation and assessment of its quality: Examination of the acceptance of a completed construction project into operation and the assessment of its quality.
--	---

Teaching Methods	The module is delivered through interactive lectures, practical exercises, and independent analytical work. Independent work is carried out in various forms, including writing essays and lecture outlines on given topics, preparing lecture materials, compiling glossaries, completing case assignments, working with information and analytical materials, translating sources, creating infographics, preparing conference abstracts, and developing multimedia presentations.
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student learning is assessed through tests, oral work, and written work. In line with the standard structure, performance is evaluated through continuous assessment (20%), midterm assessment (30%), and a final examination (50%). The continuous assessment evaluates active participation in lectures and practical lessons, seminar discussions, and the completion of independent work such as essays, glossaries, case assignments, infographics, and multimedia presentations on the topics of the course. The midterm assessment consists of written and oral tests together with the evaluation of structured independent study projects. The final examination is a comprehensive test of the theoretical and practical mastery of the course, covering the concept, structure and management of investment projects, investment strategy development, the project life cycle and business plan, project marketing, the capital budget and funding sources, the production plan, the investment climate, and project risk, quality, team and cost management. Successful completion of all assigned independent study tasks is a prerequisite for taking the final examination.

	Grading criteria and assessment scale: Student academic achievement is evaluated on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student can fully explain the essence and content of the subject, maintains scientific rigor and logic while avoiding errors and confusion, has a clear understanding of the theoretical and practical significance of the subject materials, demonstrates independent thinking, answers questions clearly and concisely, carefully prepares outlines, completes all independent assignments fully and accurately, fully masters the laws and other regulatory legal documents related to the subject, publishes a scientific article on a related topic, and can explain historical processes. Good (70–89.9 points / Grade 4): The student understands the essence and content of the subject without scientific or logical confusion, understands the practical significance of the content, performs the tasks and assignments within the curriculum framework, correctly answers the questions given, carefully formulates outlines, fully completes independent assignments, and masters the laws and other regulatory documents related to the subject. Average / Satisfactory (60–69.9 points / Grade 3): The student has a general understanding of the subject, covers and explains topics in a narrow scope with some confusion, does not explain fluently, gives vague and confusing answers to questions, and does not properly formulate the subject text. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student shows no preparation, has no understanding of the subject, has copied the subject text from others, makes serious mistakes and confusion in the text, does not
--	--

	answer the questions asked, or does not know the subject.

Field	Description
Module Title	INTERNATIONAL FINANCIAL CENTERS
Module Code	XMMA2305
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	III semester
Module objective	The objective of the International Financial Centers module is to provide students with knowledge of the structure, functions and significance of international financial centers in the global economy, and to develop their analytical skills and professional competencies in evaluating international financial markets, capital movements, financial institutions and global financial integration.
Module Learning Outcomes	Knowledge: LO1. Explain the nature, structure, functions and development of international financial centers, their role in the global financial system, and their contribution to international capital flows and economic growth. LO2. Apply knowledge, skills and competencies related to international financial markets, global financial institutions, regulatory frameworks, financial services, and the factors determining the competitiveness of leading international financial centers. Skills:

	LO3. Understand the characteristics, functions and classification of international financial centers. LO4. Analyze the role of international financial centers in facilitating global investment, trade and financial transactions. LO5. Assess the factors influencing the development and competitiveness of international financial centers. LO6. Evaluate international financial market trends and their impact on financial centers and economic development. Competencies: LO7. Analyze and compare the performance of major international financial centers and prepare analytical reports. LO8. Apply knowledge of international financial regulations, institutions and market practices in professional activities. LO9. Demonstrate professional competence in understanding global financial integration, international investment processes and contemporary developments in international finance.
Content	Lectures: L1. Scientific and theoretical perspectives on the formation of international financial centers: Examination of the scientific and theoretical perspectives on the formation of international financial centers. L2. Classification of international financial centers: Study of the classification of international financial centers. L3. World stages of development of international financial centers and the conditions for their formation: Analysis of the world stages of development of international financial centers and the conditions for their formation.

	L4. The assessment mechanism for global financial centers (based on the Global Financial Centers Index): Study of the assessment mechanism for global financial centers based on the Global Financial Centers Index. L5. The assessment mechanism for global financial centers (based on the Xinhua-Dow Jones International Financial Centers Development Index): Study of the assessment mechanism for global financial centers based on the Xinhua-Dow Jones International Financial Centers Development Index. L6. International capital flows in global financial centers: Examination of international capital flows in global financial centers. L7. The importance of sovereign credit ratings in shaping international financial centers: Analysis of the importance of sovereign credit ratings in shaping international financial centers. L8. The institutional structure of international financial centers: Study of the institutional structure of international financial centers. L9. Offshore international financial centers: Examination of offshore international financial centers. L10. Issues of forming international financial centers in Uzbekistan: Study of the issues of forming international financial centers in Uzbekistan. Practical lessons: P1. Scientific and theoretical perspectives on the formation of international financial centers: Practical study of the theoretical perspectives on the formation of international financial centers. P2. Classification of international financial centers: Practical analysis of the classification of international financial centers.
--	---

	P3. World stages of development of international financial centers and the conditions for their formation: Practical study of the stages of development of international financial centers and the conditions for their formation. P4. The assessment mechanism for global financial centers (based on the Global Financial Centers Index): Practical application of the Global Financial Centers Index in assessing financial centers. P5. The assessment mechanism for global financial centers (based on the Xinhua-Dow Jones International Financial Centers Development Index): Practical application of the Xinhua-Dow Jones Index in assessing financial centers. P6. International capital flows in global financial centers: Practical analysis of international capital flows in global financial centers. P7. The importance of sovereign credit ratings in shaping international financial centers: Practical study of the role of sovereign credit ratings in shaping financial centers. P8. The institutional structure of international financial centers: Practical analysis of the institutional structure of international financial centers. P9. Offshore international financial centers: Practical study of offshore international financial centers. P10. Issues of forming international financial centers in Uzbekistan: Practical analysis of the issues of forming international financial centers in Uzbekistan. Self-Assignments: SA1. The essence and structure of international financial capital movements:
--	--

	Independent study of the essence and structure of international financial capital movements. SA2. Structure and characteristics of the international financial market: Study of the structure and characteristics of the international financial market. SA3. Factors and concepts of crises in international financial markets: Examination of the factors and concepts of crises in international financial markets. SA4. Processes and priorities for forming an investment climate in international financial centers: Study of the processes and priorities for forming an investment climate in international financial centers. SA5. Composition and analysis of ratings issued by international rating agencies: Analysis of the composition of ratings issued by international rating agencies. SA6. Functional management of international rating agencies and its importance: Study of the functional management of international rating agencies and its importance. SA7. Priority principles and tasks of international financial centers: Examination of the priority principles and tasks of international financial centers. SA8. Stages of formation and strategy development of international financial centers: Study of the stages of formation and strategy development of international financial centers. SA9. The conditions created for receiving favorable investment climate ratings from international rating agencies for the national economy: Analysis of the conditions created for receiving favorable investment climate ratings from international rating agencies for the national economy. SA10. Use of strategic resources by international financial centers: Study of the
--	--

	use of strategic resources by international financial centers. SA11. Institutional foundations and conditions for the establishment of financial centers: Examination of the institutional foundations and conditions for the establishment of financial centers. SA12. Forms of institutional activity in the financial market in the formation of international financial centers in Uzbekistan: Study of the forms of institutional activity in the financial market in forming international financial centers in Uzbekistan. SA13. Offshore financial centers and their formation: Study of offshore financial centers and their formation. SA14. Types and characteristics of offshore financial centers: Analysis of the types and characteristics of offshore financial centers. SA15. Development of investment project options: Study of the development of investment project options. SA16. Procedures for conducting transactions with undisclosed offshore countries and territories in financial transactions in Uzbekistan: Examination of the procedures for conducting transactions with undisclosed offshore countries and territories in financial transactions in Uzbekistan. SA17. The need to form international financial centers in Uzbekistan: Study of the need to form international financial centers in Uzbekistan. SA18. Procedures for assessing the viability of international financial centers: Study of the procedures for assessing the viability of international financial centers. SA19. The territorial and sectoral composition of the advantages of forming international financial centers in the country: Analysis of the territorial and sectoral
--	--

	composition of the advantages of forming international financial centers in the country. SA20. Directions for attracting foreign investment in Uzbekistan and transforming it into an international financial center: Study of the directions for attracting foreign investment in Uzbekistan and transforming it into an international financial center. SA21. Processes and stages of formation of international financial centers: Examination of the processes and stages of the formation of international financial centers. SA22. Monitoring economic indicators of international financial centers: Study of the monitoring of the economic indicators of international financial centers. SA23. The essence and functions of international financial centers: Study of the essence and functions of international financial centers. SA24. Function and structure of international financial centers: Examination of the function and structure of international financial centers. SA25. Features of the business plan of international financial centers: Study of the features of the business plan of international financial centers. SA26. The structure and essence of the international financial centers market: Analysis of the structure and essence of the international financial centers market. SA27. International financial centers program and budget: Study of the program and budget of international financial centers. SA28. The essence of international financial capital flows: Study of the essence of international financial capital flows. SA29. Mechanism for determining the ranking of global financial centers: Examination of the mechanism for determining the ranking of global financial centers.
--	--

	SA30. Comparative importance of factors assessing the competitiveness of financial centers: Analysis of the comparative importance of the factors assessing the competitiveness of financial centers. SA31. Marketing management in the implementation process of financial centers: Study of marketing management in the implementation process of financial centers. SA32. Theoretical foundations of the composition of international financial capital: Study of the theoretical foundations of the composition of international financial capital. SA33. Evaluation of international financial centers: Examination of the evaluation of international financial centers. SA34. Developing and implementing the budget of international financial centers and decision-making: Study of developing and implementing the budget of international financial centers and decision-making. SA35. Investment opportunities and prospects of international financial centers: Analysis of the investment opportunities and prospects of international financial centers. SA36. Overall cost structure and analysis of international financial centers: Study of the overall cost structure and analysis of international financial centers. SA37. International financial centers planning, organizing and controlling procedures: Examination of the planning, organizing and controlling procedures of international financial centers. SA38. International financial centers control and regulation: Study of the control and regulation of international financial centers. SA39. Measures to prevent risks in international financial centers: Analysis of the measures to prevent risks in international financial centers.
--	--

	SA40. Evaluation of the operation and quality of international financial centers: Study of the evaluation of the operation and quality of international financial centers.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, and independent analytical work. Independent work is carried out in various forms, including writing essays and lecture outlines on given topics, preparing lecture materials, compiling glossaries, completing case assignments, working with information and analytical materials, translating sources, creating infographics, preparing conference abstracts, and developing multimedia presentations.
Exams and Assessment	Type of examination (written, oral, project) and its weight: Student learning is assessed through tests, oral work, and written work. In line with the standard structure, performance is evaluated through continuous assessment (20%), midterm assessment (30%), and a final examination (50%). The continuous assessment evaluates active participation in lectures and practical lessons, seminar discussions, and the completion of independent work such as essays, glossaries, case assignments, infographics, and multimedia presentations on the topics of the course. The midterm assessment consists of written and oral tests together with the evaluation of structured independent study projects. The final examination is a comprehensive test of the theoretical and practical mastery of the course, covering the formation, classification and development of international financial centers, the assessment mechanisms (the Global Financial Centers Index and the Xinhua-Dow Jones Index), international capital flows and sovereign credit ratings, the institutional and offshore structures of financial centers, and the

	issues of forming international financial centers in Uzbekistan. Successful completion of all assigned independent study tasks is a prerequisite for taking the final examination. Grading criteria and assessment scale: Student academic achievement is evaluated on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student can fully explain the essence and content of the subject, maintains scientific rigor and logic while avoiding errors and confusion, has a clear understanding of the theoretical and practical significance of the subject materials, demonstrates independent thinking, answers questions clearly and concisely, carefully prepares outlines, completes all independent assignments fully and accurately, fully masters the laws and other regulatory legal documents related to the subject, publishes a scientific article on a related topic, and can explain historical processes. Good (70–89.9 points / Grade 4): The student understands the essence and content of the subject without scientific or logical confusion, understands the practical significance of the content, performs the tasks and assignments within the curriculum framework, correctly answers the questions given, carefully formulates outlines, fully completes independent assignments, and masters the laws and other regulatory documents related to the subject. Average / Satisfactory (60–69.9 points / Grade 3): The student has a general understanding of the subject, covers and explains topics in a narrow scope with some confusion, does not explain fluently, gives vague and confusing answers to questions, and does not properly formulate the subject text. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student shows no preparation,
--	---

	has no understanding of the subject, has copied the subject text from others, makes serious mistakes and confusion in the text, does not answer the questions asked, or does not know the subject.

Module Title	PROCUREMENT BY BUDGET AND CORPORATE CUSTOMERS
Module Code	BKBX2305
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	III semester (master's degree)
Module objective	The objective of the Procurement by Budget and Corporate Customers module is to develop in students theoretical knowledge and practical skills for organizing the procurement activities of budget and corporate customers and managing them effectively in legal, economic and organizational terms, for ensuring transparency in the public procurement process, reducing corruption risks, making rational use of national and international tender mechanisms, and optimally meeting the needs of corporate customers.
Module Learning Outcomes	Knowledge: LO1. Explain the organization of the procurement activities of budget and corporate customers, the concept of public procurement and its types, the forms of carrying out public procurement and their application in practice, and the models of organizing procurement by budget and corporate customers. LO2. Interpret the process and mechanism of organizing procurement by budget and corporate customers in the Republic of Uzbekistan, the planning of such procurement, the stages of organizing public procurement, and the procedures for carrying it out. Skills: LO3. Make decisions regarding procurement by budget and corporate customers.

	L04. Conclude and execute the procurement contracts of budget and corporate customers. L05. Apply the control system of procurement by budget and corporate customers. Competencies: L06. Select appropriate strategic methods for managing procurement by budget and corporate customers. L07. Apply the experience of organizing public procurement in foreign countries and adapt their best practices to Uzbekistan's public procurement system.
Content	Lectures: L1. The essence of procurement by budget and corporate customers and its socio-economic significance: Examination of the essence of procurement by budget and corporate customers and its socio-economic significance. L2. Legal foundations for carrying out procurement by budget and corporate customers: Study of the national and international legal foundations for carrying out procurement by budget and corporate customers. L3. Models and forms of organizing public procurement by budget and corporate customers: Analysis of the models and forms of organizing public procurement by budget and corporate customers. L4. General requirements concerning the public procurement process of budget and corporate customers: Study of the general requirements governing the public procurement process of budget and corporate customers. L5. Carrying out public procurement through an electronic store (e-shop): Examination of the procedure for carrying out public procurement through an electronic store (e-shop).

	L6. Carrying out public procurement through an electronic store (e-shop): Further study of carrying out public procurement through an electronic store (e-shop). L7. Auction held to reduce the starting price: Study of the auction held to reduce the starting price and its application in procurement. L8. Competitive bidding: Examination of the competitive bidding method and the rules for its conduct. L9. Carrying out public procurement through tenders: Study of the procedure for carrying out public procurement through tenders. L10. Public procurement carried out with a single supplier: Examination of public procurement carried out with a single supplier and the cases of its application. L11. Monitoring and control of procurement procedures: Study of the monitoring and control of procurement procedures. L12. Combating corruption in organizing public procurement by budget and corporate customers: Analysis of the methods of combating corruption in organizing public procurement by budget and corporate customers. L13. Directions for improving the public procurement system of budget and corporate customers: Study of the directions for improving the public procurement system of budget and corporate customers. L14. Directions for improving the public procurement system of budget and corporate customers: Further examination of the directions for improving the public procurement system of budget and corporate customers. L15. Foreign countries' experience in managing the public procurement system of budget and corporate customers: Analysis of foreign countries' experience in managing the
--	--

	public procurement system of budget and corporate customers. Practical lessons: P1. The essence of procurement by budget and corporate customers and its socio-economic significance: Practical analysis of the socio-economic significance of procurement by budget and corporate customers. P2. Legal foundations for carrying out procurement by budget and corporate customers: Practical study of the legal foundations for carrying out procurement by budget and corporate customers. P3. Models and forms of organizing public procurement by budget and corporate customers: Practical analysis of the models and forms of organizing public procurement. P4. General requirements concerning the public procurement process of budget and corporate customers: Practical study of the general requirements for the public procurement process. P5. Carrying out public procurement through an electronic store (e-shop): Practical exercises carrying out public procurement through an electronic store (e-shop). P6. Carrying out public procurement through an electronic store (e-shop): Further practical exercises on public procurement through an electronic store (e-shop). P7. Auction held to reduce the starting price: Practical study of the auction held to reduce the starting price. P8. Competitive bidding: Practical exercises on the competitive bidding method. P9. Carrying out public procurement through tenders: Practical exercises carrying out public procurement through tenders.
--	--

	P10. Public procurement carried out with a single supplier: Practical study of public procurement carried out with a single supplier. P11. Monitoring and control of procurement procedures: Practical exercises on monitoring and controlling procurement procedures. P12. Combating corruption in organizing public procurement by budget and corporate customers: Practical analysis of combating corruption in public procurement using case studies. P13. Directions for improving the public procurement system of budget and corporate customers: Practical study of the directions for improving the public procurement system. P14. Directions for improving the public procurement system of budget and corporate customers: Further practical study of the directions for improving the public procurement system. P15. Foreign countries' experience in managing the public procurement system of budget and corporate customers: Practical analysis of foreign countries' experience in managing public procurement systems. Self-Assignments: SA1. The socio-economic significance of organizing procurement by budget and corporate customers and its impact on the economy: Independent study of the socio-economic significance of organizing procurement by budget and corporate customers and its impact on the economy. SA2. National and international legal foundations of organizing procurement by budget and corporate customers: Study of the national and international legal foundations of organizing procurement by budget and corporate customers.
--	---

	SA3. Models of organizing procurement by budget and corporate customers: Examination of the models of organizing procurement by budget and corporate customers. SA4. Stages of development of the public procurement system in the Republic of Uzbekistan: Study of the stages of development of the public procurement system in the Republic of Uzbekistan. SA5. General requirements concerning the public procurement process of budget and corporate customers: Study of the general requirements governing the public procurement process of budget and corporate customers. SA6. The significance of introducing electronic trading into the public procurement system: Analysis of the significance of introducing electronic trading into the public procurement system. SA7. Advantages of carrying out public procurement through electronic auctions: Study of the advantages of carrying out public procurement through electronic auctions. SA8. Organizing tender bidding and monitoring prices in carrying out procurement: Examination of organizing tender bidding and monitoring prices in carrying out procurement. SA9. Analysis of factors influencing the determination of the winner in tender bidding: Analysis of the factors influencing the determination of the winner in tender bidding. SA10. Foreign countries' experience in managing the public procurement system of budget and corporate customers: Comparative study of foreign countries' experience in managing the public procurement system. SA11. Methods of combating corruption in organizing public procurement by budget
--	--

	and corporate customers: Study of the methods of combating corruption in organizing public procurement. SA12. Strategies for developing the electronic system of public procurement: Examination of strategies for developing the electronic system of public procurement. SA13. Influencing the development of small business entities through the management of the public procurement system: Study of how the management of the public procurement system influences the development of small business entities. SA14. The significance of “Green procurement” in the public procurement system of budget and corporate customers: Analysis of the significance of “Green procurement” in the public procurement system. SA15. Directions for increasing openness and transparency in the public procurement system: Study of the directions for increasing openness and transparency in the public procurement system.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, and independent analytical work. Independent work is carried out in various forms, including writing essays and lecture outlines on given topics, preparing lecture materials, compiling glossaries, completing case assignments, working with information and analytical materials, translating sources, creating infographics, preparing conference abstracts, and developing multimedia presentations.
Prerequisites	Sustainable finance (BAM1205) Management finance (BOM1105) Management of investment projects (ILB2305)
Exams and Assessment	Type of examination (written, oral, project) and its weight:

	Student learning is assessed through tests, oral work, and written work. In line with the standard structure, performance is evaluated through continuous assessment (20%), midterm assessment (30%), and a final examination (50%). The continuous assessment evaluates active participation in lectures and practical lessons, seminar discussions, and the completion of independent work such as essays, glossaries, case assignments, infographics, and multimedia presentations on the topics of the course. The midterm assessment consists of written and oral tests together with the evaluation of structured independent study projects. The final examination is a comprehensive test of the theoretical and practical mastery of the course, covering the essence and legal foundations of procurement by budget and corporate customers, the models and forms of organizing procurement, the electronic-store, auction, competitive-bidding, tender and single-supplier procurement methods, the monitoring and control of procurement, combating corruption, and foreign countries' experience. Successful completion of all assigned independent study tasks is a prerequisite for taking the final examination. Grading criteria and assessment scale: Student academic achievement is evaluated on a 100-point grading scale mapped to standard performance criteria: Excellent (90–100 points / Grade 5): The student can fully explain the essence and content of the subject, maintains scientific rigor and logic while avoiding errors and confusion, has a clear understanding of the theoretical and practical significance of the subject materials, demonstrates independent thinking, answers questions clearly and concisely, carefully prepares outlines, completes all independent
--	---

	assignments fully and accurately, fully masters the laws and other regulatory legal documents related to the subject, publishes a scientific article on a related topic, and can explain historical processes. Good (70–89.9 points / Grade 4): The student understands the essence and content of the subject without scientific or logical confusion, understands the practical significance of the content, performs the tasks and assignments within the curriculum framework, correctly answers the questions given, carefully formulates outlines, fully completes independent assignments, and masters the laws and other regulatory documents related to the subject. Average / Satisfactory (60–69.9 points / Grade 3): The student has a general understanding of the subject, covers and explains topics in a narrow scope with some confusion, does not explain fluently, gives vague and confusing answers to questions, and does not properly formulate the subject text. Unsatisfactory (0–59.9 points / Grade 2): Assigned if the student shows no preparation, has no understanding of the subject, has copied the subject text from others, makes serious mistakes and confusion in the text, does not answer the questions asked, or does not know the subject.

Module Title	PUBLIC FINANCIAL CONTROL
Module Code	DMN2305
Credit Points (ECTS)	5 Credits
Workload	Total workload: 150 hours Contact hours: 60 hours (30 hours Lecture, 30 hours Practical lessons) Self-Assignments: 90 hours
Frequency/Duration	III semester (master's degree)
Module objective	The objective of the Public Financial Control module is to develop in students theoretical knowledge and practical skills concerning the essence, content and significance of state financial control, the theoretical and legal foundations of organizing it, and its types, forms and methods, as well as for organizing financial control in the nationwide control bodies, the Accounts Chamber of the Republic of Uzbekistan, and the financial, tax, customs and banking systems, for carrying out control over the budget process and the activity of budget organizations, and for making rational use of audit control.
Module Learning Outcomes	Knowledge: LO1. Explain the essence and significance of state financial control, its classification and description, the theoretical and legal foundations of organizing it, and the types, forms and methods of organizing state financial control. LO2. Interpret the role of nationwide control bodies in organizing financial control, the

	implementation of financial control by financial bodies, and the organization of control work in the tax, customs, insurance and banking sectors. Skills: L03. Organize budget control. L04. Control the process of drawing up and executing the budget. L05. Carry out financial control in planning the cost estimates of budget organizations and in budget financing. Competencies: L06. Assess the significance of control in the financial-economic activity of budget organizations. L07. Apply the significance of audit control in carrying out financial control.
Content	Lectures: L1. Foundations of organizing state financial control. Objects and subjects of financial control: Examination of the foundations of organizing state financial control and of the objects and subjects of financial control. L2. Types, forms and methods of organizing state financial control: Study of the types, forms and methods of organizing state financial control. L3. The role of nationwide control bodies in organizing financial control: Analysis of the role of nationwide control bodies in organizing financial control. L4. The Accounts Chamber of the Republic of Uzbekistan and its role in organizing financial control: Study of the Accounts Chamber of the Republic of Uzbekistan and its role in organizing financial control. L5. Implementation of financial control by financial bodies: Examination of the implementation of financial control by financial bodies. L6. Implementation of financial control by financial bodies: Further study of the

	implementation of financial control by financial bodies. L7. Organizing tax control work. The essence of cameral (desk) control: Study of the organization of tax control work and the essence of cameral (desk) control. L8. Organizing customs control work: Examination of the organization of customs control work. L9. Organizing financial control in banking institutions: Study of the organization of financial control in banking institutions. L10. Organizing budget control: Examination of the organization of budget control. L11. Controlling the process of drawing up and executing the budget: Study of controlling the process of drawing up and executing the budget. L12. Financial control in planning the cost estimates of budget organizations and in budget financing: Examination of financial control in planning the cost estimates of budget organizations and in budget financing. L13. The significance of control in the financial-economic activity of budget organizations: Study of the significance of control in the financial-economic activity of budget organizations. L14. The significance of control in the financial-economic activity of budget organizations: Further examination of the significance of control in the financial-economic activity of budget organizations. L15. The significance of audit control in carrying out financial control: Analysis of the significance of audit control in carrying out financial control. Practical lessons: P1. Foundations of organizing state financial control. Objects and subjects of financial
--	--

	control: Practical study of the foundations of state financial control and its objects and subjects. P2. Types, forms and methods of organizing state financial control: Practical analysis of the types, forms and methods of organizing state financial control. P3. The role of nationwide control bodies in organizing financial control: Practical study of the role of nationwide control bodies in organizing financial control. P4. The Accounts Chamber of the Republic of Uzbekistan and its role in organizing financial control: Practical analysis of the activity of the Accounts Chamber of the Republic of Uzbekistan. P5. Implementation of financial control by financial bodies: Practical exercises on the implementation of financial control by financial bodies. P6. Implementation of financial control by financial bodies: Further practical exercises on financial control carried out by financial bodies. P7. Organizing tax control work. The essence of cameral (desk) control: Practical study of organizing tax control work and cameral (desk) control. P8. Organizing customs control work: Practical study of organizing customs control work. P9. Organizing financial control in banking institutions: Practical exercises on organizing financial control in banking institutions. P10. Organizing budget control: Practical study of organizing budget control. P11. Controlling the process of drawing up and executing the budget: Practical exercises on controlling the drawing up and execution of the budget. P12. Financial control in planning the cost estimates of budget organizations and in budget financing: Practical analysis of financial control in planning cost estimates and budget financing.
--	---

	P13. The significance of control in the financial-economic activity of budget organizations: Practical study of the significance of control in the activity of budget organizations. P14. The significance of control in the financial-economic activity of budget organizations: Further practical study of control in the financial-economic activity of budget organizations. P15. The significance of audit control in carrying out financial control: Practical analysis of the significance of audit control in carrying out financial control. Self-Assignments: SA1. Foundations of organizing state financial control and its socio-economic significance: Independent study of the foundations of organizing state financial control and its socio-economic significance. SA2. Types, forms and methods of organizing state financial control: Study of the types, forms and methods of organizing state financial control. SA3. The role of nationwide control bodies in organizing financial control: Analysis of the role of nationwide control bodies in organizing financial control. SA4. Forms of parliamentary control in developed countries: Examination of the forms of parliamentary control in developed countries. SA5. The Accounts Chamber of the Republic of Uzbekistan and its role in organizing financial control: Study of the Accounts Chamber of the Republic of Uzbekistan and its role in organizing financial control. SA6. Implementation of financial control by financial bodies: Study of the implementation of financial control by financial bodies. SA7. The modern tax system and the essence of tax control: Examination of the modern tax system and the essence of tax control.
--	--

	SA8. The essence and necessity of cameral (desk) control: Study of the essence and necessity of cameral (desk) control. SA9. The essence and tasks of customs control: Analysis of the essence and tasks of customs control. SA10. Organizing financial control in banking institutions and the principles of international banking supervision: Study of organizing financial control in banking institutions and the principles of international banking supervision. SA11. Organizing budget control: Examination of organizing budget control. SA12. Controlling the process of drawing up and executing the budget: Study of controlling the process of drawing up and executing the budget. SA13. Financial control in planning the cost estimates of budget organizations and in budget financing: Study of financial control in planning the cost estimates of budget organizations and in budget financing. SA14. The significance of control-revision (inspection) in the financial-economic activity of budget organizations: Analysis of the significance of control-revision (inspection) in the financial-economic activity of budget organizations. SA15. The significance of audit control in carrying out financial control: Study of the significance of audit control in carrying out financial control.
Teaching Methods	The module is delivered through interactive lectures, practical exercises, and independent analytical work.
